

SYLLABUS

(With effect from 2023 -24)

ಪಠ್ಯಕ್ರಮ

(ಶೈಕ್ಷಣಿಕ ವರ್ಷ 2023-24)

**Bachelor Degree
In
Automobile Engineering**

III & IV Semester

Out Come Based Education
With
Choice Based Credit System

[National Education Policy Scheme]

P.E.S. College of Engineering, Mandya - 571 401, Karnataka

*[An Autonomous Institution affiliated to VTU, Belagavi,
Grant – in – Aid Institution (Government of Karnataka),
Accredited by NBA (All UG Programs), NAAC and Approved by AICTE, New Delhi]*

ಪಿ.ಇ.ಎಸ್. ತಾಂತ್ರಿಕ ಮಹಾವಿದ್ಯಾಲಯ

ಮಂಡ್ಯ-571 401, ಕರ್ನಾಟಕ

(ವಿ.ಟಿ.ಯು, ಬೆಳಗಾವಿ ಅಡಿಯಲ್ಲಿನ ಸ್ವಾಯತ್ತ ಸಂಸ್ಥೆ)

Ph : 08232- 220043, Fax : 08232 – 222075, Web : www.pescemandya.org

VISION

“PESCE shall be a leading institution imparting quality Engineering and Management education developing creative and socially responsible professionals.”

MISSION

- *Provide state of the art infrastructure, motivate the faculty to be proficient in their field of specialization and adopt best teaching-learning practices.*
- *Impart engineering and managerial skills through competent and committed faculty using outcome based educational curriculum.*
- *Inculcate professional ethics, leadership qualities and entrepreneurial skills to meet the societal needs.*
- *Promote research, product development and industry-institution interaction.*

QUALITY POLICY

Highly committed in providing quality, concurrent technical education and continuously striving to meet expectations of stake holders.

CORE VALUES

Professionalism

Empathy

Synergy

Commitment

Ethics

Department of Automobile Engineering

The discipline Automobile Engineering was established in the year 1980, and has gained expertise and contributing vitally to the Automobile Engineering community. The focus is to consistently pursue in providing innovative and quality training to the talented and dedicated students, to empower them in engineering for the development of national economy, specialized in transport sector. We the lead the way in Karnataka to introduce the Department of Automobile Engineering to impart sound automotive knowledge to the students with a passion towards Automobiles. We take the honor in being recognized as a 'research centre' in Karnataka by VTU and Mysore University. In addition to these regular programmes, this department is also actively involved in conducting Faculty Development Programmes, Technical talks, Training programmes and technical visits to various industries & regular industrial trainings for the benefit of students. The department has well qualified and well experienced faculty members to meet the present day curriculum requirements both in theory as well as practical aspects.

The vision and mission of Department of Automobile Engineering is as mentioned below

VISION

To be a distinguished centre for imparting quality education in automobile engineering to develop competent and socially responsible engineers and carryout research on continuous basis for the betterment of the society.

MISSION

- AUM1:** To give best learning experience through innovative teaching practices supported by excellent laboratory infrastructure and exposure to recent trends in the automotive industry.
- AUM2:** Provide in-depth knowledge in automobile engineering with equal emphasis on theoretical and practical aspects and interdisciplinary problem solving skills.
- AUM3:** Inculcate societal responsibility and ethical values through personality development programs.
- AUM4:** Focus on Industry-institute interaction, for better understanding of the state of the art technologies, Promoting research and also to build the spirit of entrepreneurship.

The departments of Automobile Engineering's vision and mission statements are aligned with PESCE's vision and mission statements. The vision of the department is derived based on the vision of the institute in consultation with internal/external stakeholders.

1.1 State the Program Educational Objectives (PEOs) (5)

Program Educational Objectives (PEOs) are broad statements that describe the career and professional accomplishments that the program is preparing the graduates to achieve. The PEOs for the program describe accomplishments that graduates are expected to achieve within three to five years after graduation

PEO1: To prepare Graduates to pursue a successful career in automotive and allied industries and/or to pursue higher education and/or to become entrepreneur.

PEO2: To develop expertise in the core area of automobile engineering such as design, manufacturing, and servicing with a focus on research and innovation for the benefit of the society.

PEO3: To enable graduates to apply interdisciplinary engineering knowledge to solve practical automobile engineering problems.

PEO4: To prepare graduates to demonstrate professionalism, team work, communication skills, ethical conduct, and societal responsibility and adapt to current trends by engaging in lifelong learning.

The PEOs should be consistent with the vision and mission of the institution and program.

The PEOs were revised with a view to prepare graduates to work in creative and socially responsible manner.

Programme Specific Outcomes (PSOs)

Specific skills enhanced in this programme can enable the Graduates to

PSO1. Apply the basic and advanced knowledge of automobile, manufacturing, materials and thermal engineering to analyze and solve a realistic/practical **problem**.

PSO2. Design basic **automotive** systems and make use of advanced automotive systems to improve the performance, safety, maintenance and management of automobiles.

PSO3. Use modern tools and carry out research in automotive domain for providing solutions to automotive and societal issues.

Programme Outcomes (POs)

Engineering program must demonstrate that their students attain the following outcomes:

PO1. Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.

PO2. Problem analysis: Identify, formulate, research literature, and analyse complex engineering

problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

- PO3. Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- PO4. Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- PO5. Modern Tool Usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- PO6. The Engineer and Society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- PO7. Environment and Sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of need for sustainable development.
- PO8. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- PO9. Individual and Team Work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- PO10. Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- PO11. Project Management and Finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- PO12. Life-long learning :**Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change

TRANSFORMS AND SERIES			
[As per Choice Based Credit System (CBCS) & OBE Scheme]			
SEMESTER – III			
Course Code:	P22MA301	Credits:	03
Teaching Hours/Week (L:T:P):	2-2-0	CIE Marks:	50
Total Number of Teaching Hours:	40	SEE Marks:	50
Course Learning Objectives:			
1	Understand the concept of infinite series; learn and apply Fourier series to represent periodical physical phenomena in engineering analysis.		
2	To facilitate students to study, analyse and apply various transforms to solve engineering problems.		
Unit	Syllabus content	No. of hours	
		Theory	Tutorial
I	<p>Infinite Series: Introduction, convergence, divergence and oscillation of a series, Tests for convergence – Comparison test, Ratio test, Cauchy’s root test Raabe’s test, (All tests without proof)- Problems.</p> <p>Self-study component: Integral Test, Alternating series, Leibnitz’s theorem – absolute and conditional convergence.</p>	06	02
II	<p>Fourier Series:</p> <p>Introduction, periodic function, even and odd functions, Dirichlet’s conditions, Euler’s formula for Fourier series (no proof). Fourier series for functions of arbitrary period of the form 2L (all particular cases) – problems, analysis- Illustrative examples from engineering field. Half Range Fourier series- Construction of Half range cosine and sine series and problems. Practical harmonic analysis- Illustrative examples from engineering field.</p> <p>Self study: Complex Fourier series.</p>	06	02
III	<p>Laplace Transforms:</p> <p>Definition – Transforms of elementary functions. Properties of Laplace Transforms- linearity, Change of scale, shifting, Transform of Derivative and Integrals, Transform of a function multiplied by t^n and division t (no proof)-Problems, Transforms of periodic function, unit step function (All results without proof)-Problems only.</p> <p>Inverse Laplace Transforms: Evaluation of inverse transforms by standard methods. Convolution theorem - Problems only.</p> <p>Self-study component- Transform of Unit impulse function. Solution of ODE by Laplace method and L-R-C circuits.</p>	06	02
IV	<p>Fourier Transforms:</p> <p>Complex Fourier Transform: Infinite Fourier transforms and Inverse Fourier transforms. Properties of Fourier Transforms- linearity Change of scale, shifting and modulation (no proof)-Problems, Fourier sine and cosine transforms and Inverse Fourier cosine and sine transforms with properties-Problems</p> <p>Convolution theorem and Parseval’s identity for Fourier Transform (no proof)-problems.</p> <p>Self study: Fourier integrals- Complex forms of Fourier integral.</p>	06	02

P.E.S. College of Engineering, Mandya
Department of Automobile Engineering

V	Z-Transforms: Definition. Some standard Z-transforms. Properties- linearity, Damping, Shifting, multiplication by n , initial and final value theorem-problems. Evaluation of Inverse Z- transforms- problems. Application to Difference Equations: Solutions of linear difference equations using Z- transforms. Self study: Convolution theorem and problems, two sided Z-transforms.	06	02
---	--	----	----

COURSE OUTCOMES: On completion of the course, student should be able to:	
CO1	Understand the fundamental concepts of infinite series, transforms of functions
CO2	Apply series and transform techniques to obtain series expansion, discrete and continuous transformation of various mathematical functions.
CO3	Analyze various signals using series expansions and differential, integral and difference equations using transforms
CO4	Evaluate indefinite integrals, differential equations and difference equations subject to initial conditions using transforms and develop series for a discontinuous function

TEACHING - LEARNING PROCESS: Chalk and Talk, power point presentation, animations, videos.

ENGINEERING THERMODYNAMICS

[As per Choice Based Credit System (CBCS) & OBE Scheme]

SEMESTER – III

Course Code: P22AU302	Semester: III	L-T-P: 3-0-0	Credits: 03
Contact Period-Lecture: 40Hrs.	Exam: 3Hrs.	Weightage: CIE:50 %;	SEE: 50%

Course Objectives:

Prerequisites: The students should have undergone the course Engineering Physics, Engineering Mathematics-1

Course Learning Objectives:

The objectives of this course are to,

- Understand the fundamental concepts and laws of thermodynamics to analyze the performance of thermal systems. L2
- Analyze the principle and process of energy interaction for different thermodynamics processes. L4
- Interpret the fundamental concepts and laws of thermodynamics to analyse the performance of thermal systems. L5
- Understand the basic concepts of thermodynamics and able to apply for the different thermodynamic cycles. L2
- Make use of mathematical expressions to analyse the performance of different thermal systems. L3

Course Content

UNIT-I

Fundamental Concepts & Definitions: Definition of Thermodynamics, Microscopic and Macroscopic approaches to the study of thermodynamics, Definitions of System (closed system) and Control Volume (open system) with examples. Definition of thermodynamic property, Intensive and extensive properties thermodynamic state, process, quasi-static process, thermodynamic cycle. Thermodynamic equilibrium, definitions of thermal, chemical and mechanical equilibrium. Zeroth law of thermodynamics. Thermodynamic definition of work, sign convention and examples to illustrate the definition of work. Work done at the system boundary, process equation and expressions for work done in different processes. Definition of heat and sign convention. Comparison of work and heat

9Hrs

Self-study component: Different temperature measuring instruments, Concept of Temperature, types of commonly used temperature scales and relation between them.

UNIT-II

First Law of Thermodynamics Statement of the First law of thermodynamics for a closed system undergoing a cyclic process First law thermodynamics for a change of state of the system and concept of energy. Energy as a property of the system and its significance. Internal Energy, Enthalpy and Specific heats. Simple numerical problems on systems undergoing closed process Steady flow process, First law applied to steady flow process, derivation of steady flow energy equation and its applications to steady flow process. Simple numerical problems on systems undergoing steady flow process

8Hrs

Self-study component: Entropy- Clausius inequality, showing cyclic integral of $\delta Q/T$ is independent of path.

UNIT-III

Second Law of Thermodynamics: Thermal reservoir, Source and sink. Heat engine, heat pump and refrigerator and their schematic representation, efficiency and coefficient of performance Kelvin - Planck and Clausius statement of the Second law of thermodynamics and equivalence of the two Statements of second law. Definition of perpetual motion machines of II kind with example. Reversible and Irreversible processes, factors that make a process irreversible. Reversible heat engine-Carnot Cycle and expression for efficiency of Carnot cycle Simple numerical problems on heat engines

7 Hrs

Self-study component: Violation of II law leads PMMK-II proof.

UNIT-IV

Air Standard Cycles Carnot Cycle, Otto Cycle, and Diesel Cycle, their P-V and T-S diagrams, description, expression for efficiencies and definition of mean effective pressures. Comparison of Otto and Diesel cycles

Reciprocating Air Compressors: Operation of a single stage reciprocating air compressors. Work input using P-V diagram and steady state flow analysis. Effect of clearance and volumetric efficiency, Adiabatic, isothermal and mechanical efficiencies. Multistage compressors, saving in work, expression for optimum intermediate pressure Imperfect inter cooling.

8 Hrs

Self-study component: Study of actual otto cycle & diesel cycle

UNIT-V

Refrigeration and Psychrometry: Introduction, pressure enthalpy diagram. Vapor compression refrigeration systems, description, analysis, refrigerating effect, capacity, power required, Units of refrigeration and COP. Properties of atmospheric air Dry Air, Relative Humidity, Specific humidity, degree of saturation, dry bulb and wet bulb temperature Psychrometric Chart and Psychrometric Process: Sensible heating or cooling, cooling and dehumidification, heating and humidification and adiabatic mixing of two streams.

8 Hrs

Self-study component: Different make of Refrigerator; at least three

Fluid Mechanics and Machinery [As per Choice Based Credit System (CBCS) & OBE Scheme] SEMESTER – III			
Course Code: P22AU303	Semester: III	L-T-P: 3-0-0	Credits: 03
Contact Period-Lecture: 40Hrs.	Exam: 3Hrs.	Weightage: CIE:50 %;	SEE: 50%
Course Objectives:			
Prerequisites: The students should have undergone the course on Elements of Mechanical Engineering.			
Course Learning Objectives (CLOs):			
This course aims to:			
<ul style="list-style-type: none">• Understand fluid properties and concepts of fluid statics, kinematics & dynamics. L2• Apply the first principles, laws to formulate relations between variables/parameters of static, kinematic & dynamic behavior fluids. L3• Analyze the effect of various parameters of fluid statics, kinematics and dynamics by solving practical problems using derived relations and losses. L4• Develop knowledge about energy conversion in Turbo machines. L3• Comprehend the functioning of Centrifugal and Reciprocating pumps. L2			
Relevance of the Course			
Fluid Mechanics course is an introductory for Undergraduate program in Engineering. The subject has a wide scope and is of prime importance in several fields of engineering and science. Present course emphasizes the fundamental underlying fluid mechanical principles of fluid statics, kinematics, dynamics, turbo machinery and application of those principles to solve real life problems. Special attention is given towards deriving all the governing equations starting from the fundamental principle. There is a well-balanced coverage of physical concepts, mathematical operations along with examples and exercise problems of practical importance. After completion of the course, the students will have a strong fundamental understanding of the basic principles of Fluid Mechanics & Machinery and will be able to apply the basic principles to analyze fluid mechanical systems.			
Course Content			
UNIT-I			
Properties of Fluids: Introduction, properties of fluids, classifications, viscosity, thermodynamic properties, Surface tension and Capillarity, Vapour pressure and Cavitation			
Fluid Statics - Pressure and its Measurement: Fluid pressure at a point, Pascal's law, pressure variation in a static fluid, Absolute, gauge, atmospheric and vacuum pressures, simple manometers, and differential manometers.			
8Hrs			
Self-study component: Thermodynamic properties, Relationship between compressibility for a gas.			
UNIT-II			
Fluid Statics - Hydrostatic forces on surfaces: Total pressure and center of pressure, vertical plane surface submerged in liquid, horizontal plane surface submerged in liquid, inclined plane surface submerged in liquid, and curved surface submerged in liquid.			
Buoyancy and Floatation: Buoyancy center of buoyancy, meta-center and meta-centric height, conditions of equilibrium of floating and submerged bodies.			
8Hrs			
Self-study component: Moment of inertia & other geometric properties of important plane surfaces.			

UNIT-III

Fluid Kinematics: Introduction, Types of fluid flow, continuity equation in one and three Dimension (Cartesian co-ordinate system only), velocity and acceleration.

Fluid Dynamics: Introduction, equations of motion, Euler's equation of motion, Bernoulli's equation from Euler's equation, Bernoulli's equation for real fluids.

Fluid flow measurements - Venturimeter, Orifice meter, Pitot tube.

8 Hrs

Self-study component: continuity equation in cylindrical polar coordinates, velocity potential Function and stream function for 2D flow and types of motion.

UNIT-IV

Flow through pipes: Introduction, loss of energy in pipes, Major Energy Losses, Darcy-Weisbach equation for loss of head due to friction in pipes, Chezy's equation for loss of head due to friction in pipes, Minor Energy Losses.

Fundamentals of Turbo machines: Parts of turbo machine, classification of turbo machines, Degree of reaction, Velocity triangles for different values of Maximum Utilization factor (no numerical)

8 Hrs

Self-study component: Hydraulic gradient and total energy line.

UNIT-V

Centrifugal Pumps: Centrifugal pump: Working of C/F pump, work done by the impeller, losses & efficiency, specific speed, multistage pump.

Reciprocating pumps: Types, work done by reciprocating pump, single acting and double acting, coefficient of discharge, Percentage slip, Air vessels

8 Hrs

Self-study component: Advantages of centrifugal pump over Reciprocating pump, Types of reciprocating pump.

MANUFACTURING PROCESS – I [As per Choice Based Credit System (CBCS) & OBE Scheme] SEMESTER – III			
Course Code: P22AU304	Semester: III	L-T-P: 3-0-2	Credits: 04
Total Theory Teaching Hours: 40 Total Laboratory Hours: 24	Exam: 3Hrs.	Weightage: CIE: 50%; SEE: 50%	
Course Learning Objectives: The objectives of this course are to, <ul style="list-style-type: none">• Acquire basic knowledge about casting, welding and metal cutting theory which are relevant to manufacturing of engineering components.• Give comprehensive insight regarding the mechanical equipment and operations involved to fulfill various applications.			
Course Content			
UNIT-I			
Introduction to Casting: Concept of Manufacturing process, Casting process- Steps involved, advantages, limitations and applications of casting process. Patterns: Definition, Pattern materials, classification of patterns, Pattern allowances. Binder: Definition and types. Casting defects, causes and remedies. <p style="text-align: right;">8 Hrs</p> Self study component: Melting furnace classification.			
UNIT-II			
Sand Moulding: Types of sand moulds, Ingredients of moulding sand and properties, core making, principles of gating: Elements of gating system, types of gates, gating ratio, Risers: types and functions. Special Moulding Process: CO ₂ moulding, Shell moulding, permanent mould casting, Pressure die casting, Squeeze Casting. <p style="text-align: right;">8 Hrs</p> Self study component: stir casting and centrifugal casting.			
UNIT-III			
Special types of welding: Resistance welding-principle, working principle, advantages, disadvantages and applications of the following types-Seam welding, Spot welding, Friction welding, Explosive welding. Metallurgical aspect in welding: Formation of different zones during welding, Heat Affected Zone (HAZ), Parameters affecting HAZ, Welding defects. <p style="text-align: right;">8 Hrs</p> Self study component: weldability and friction stir welding.			
UNIT-IV			
Theory of Metal Cutting: Introduction, Single point cutting tool nomenclature, geometry, orthogonal and oblique cutting, Mechanism of chip formation, Types of chips Cutting tool materials: HSS, Carbides, Coated carbides, CBN and Ceramics. Heat generation in metal cutting, factors affecting heat generation. Tool Wear: Causes and types, effects of cutting parameters on tool life, tool failure criteria, Taylor's tool life equation, simple problems on tool life evaluation. <p style="text-align: right;">8 Hrs</p> Self study component: Cutting Fluids: Desired properties, types and selection.			
UNIT-V			
Machine Tools and Mechanisms: Constructional feature of turret lathe, Turret lathe indexing mechanism, Shaping Machine-classification of shaping machine, Shaper mechanism - Crank and slotted lever quick return mechanism and hydraulic driving mechanism, Planing Machine-classification of planer - Planer mechanism -open and cross belt drive mechanism. <p style="text-align: right;">8 Hrs</p> Self study component: Milling machine and grinding machine.			

Practical Content

24 Hrs

Testing of molding sand and core sand:

1. Compression, shear and permeability tests on green sand specimen.
2. Sieve analysis to find grain fineness number of base sand.

Foundry and casting:

3. Use of foundry tools and other equipments.
4. Preparation of moulds using two moulding boxes with and without Patterns (Split pattern, Core boxes).
5. Production of metal component using sand casting.

Machining processes:

6. Preparation of one model on lathe involving plain turning, facing, knurling and eccentric turning.
7. External threads cutting, V-thread and square thread.
8. Taper turning by different methods.
9. Cutting of V-groove using a shaper.
10. Surface grinding.

Course Outcomes: At the end of the course, students will be able to,

1. **Apply** the concept of primary manufacturing processes such as casting, welding and machining.
2. **Identify** real-time applications of special casting, welding and Machining processes.
3. **Examine** the defects in casting and welding by **analysing** the microstructure.
4. **Analyse** various cutting parameters in metal cutting.
5. **Prepare** a report as an **individual** or as a **team** member to **communicate** effectively.

MATERIAL SCIENCE AND METALLURGY [As per Choice Based Credit System (CBCS) & OBE Scheme] SEMESTER – III			
Course Code: P22AU305	Semester: III	L-T-P: 3-0-2	Credits: 04
Total Theory Teaching Hours: 40 Total Laboratory Hours: 24	Exam: 3 Hrs.	Weightage: CIE:50%; SEE:50%	
Course Learning Objectives: The objectives of this course are to, <ul style="list-style-type: none">• Material science and Metallurgy perceives materials behavior and atomic characterization, interpret with the selection of materials for suitable applications.• The course introduces basic knowledge over phase diagrams and also deals with behaviors, transformation of metals expose to different environment and heat treatment.• Course also exposed to inculcate the knowledge over advanced materials and composite materials.			
Course Content			
UNIT-I			
Structure of Crystalline Solids: Atomic bonding in solids, Fundamental concepts of unit cell, space lattice, Bravais lattice, Unit cells for cubic structure and HCP, study of stacking of layers of atoms in cubic structures and HCP, Calculation of atomic radius, co-ordination number and atomic packing factors for different cubic structures. Crystal imperfections - point, line, surface and volume defects. Diffusion Mechanisms and Fick's laws of diffusion.			
8 Hrs			
Self-study component: Crystal planes and Direction			
UNIT-II			
Mechanical characteristics of metals: Tensile properties, true stress and true strain, Hardness, Rockwell, Vickers and Brinell hardness testing, plastic deformation - slip and twinning. Fracture type, stages in Cup and Cone fracture, fracture toughness, Griffith's criterion. Fatigue test, S-N curves, factors affecting fatigue life and protection methods. The creep curves, Mechanism of creep.			
8 Hrs			
Self-study component: ASTM standards for different mechanical tests.			
UNIT-III			
Phase Diagrams and Solid Solution: Solid solutions, Rules governing formation of solid solutions, Phase diagram- Basic terms, phase rule, cooling curves, construction of Phase diagrams, interpretation of equilibrium diagrams, Types of Phase diagrams, Lever rule. Iron Carbon Equilibrium Diagram: Phases in the Fe-C system, invariant reactions, critical temperatures, Microstructures of slowly cooled steels, effect of alloying elements on the Fe-C diagram. Construction of TTT diagram, TTT diagram for hypo and hyper eutectoid steels.			
8 Hrs			
Self-study component: Continuous Cooling Transformation (CCT) diagram.			
UNIT-IV			
Heat Treatment and Strengthening Method: Annealing and its types, normalizing, hardening, tempering, martempering, austempering, surface hardening: case hardening, carburizing, cyaniding, nitriding, Induction hardening, hardenability, Jominy end-quench test.			
8 Hrs			
Self-study component: Age hardening of Al and Cu alloys			

UNIT-V

Composites: Classification, functions of matrix and reinforcement in composites, Rule of mixture, Polymer, metal and ceramic matrix composites, carbon- carbon composites, Applications of composites.

Advanced Materials: Nanomaterials- Size-dependant properties, applications, Shape Memory Alloys (SMA) - Characteristics, applications, Metallic glasses: properties and applications.

8 Hrs

Self-study component: Cryogenic materials

Practical Content

24 Hrs

1. Preparation of specimen for metallographic examination.
2. Rockwell Hardness test.
3. Brinell Hardness test.
4. Vickers Hardness test.
5. Tension test using a UTM.
6. Izod Impact Tests.
7. Charpy Impact Tests.
8. Heat treatment: Annealing, Normalizing, Hardening and Tempering of Ferrous alloys and study their hardness.
9. Shear tests using UTM.
10. Bending Test using UTM.

COMPUTER AIDED MACHINE DRAWING [As per Choice Based Credit System (CBCS) & OBE Scheme] SEMESTER – III			
Course Code: P22AUL306	Semester: III	L-T-P: 0-0-2	Credits: 01
Contact Period - Lecture: 30(P) Hrs	Exam: 3 Hrs.	Weightage: CIE:50%;	SEE:50%
Course Learning Objectives: The objectives of this course are to, <ul style="list-style-type: none">• Empowering the students with drafting skills and strengthens their ability to draw, read and interpret machine part.• Assemble the machine parts using computer software and implementing the standards, codes and norms.			
Course Content			
Part - A			
Section and Development of Solids: Sections of Pyramids, Prisms, Cone and Cylinder resting only on their bases. True shape of sections, Development of lateral surfaces. Orthographic Views: Conversion of isometric views into orthographic projections of simple machine parts. (Bureau of Indian standards conventions are to be followed for the drawings). Thread Forms and Fasteners: Thread terminology, sectional view of threads. ISO Metric (Internal and External), BSW (Internal and External), square and Acme threads. Hexagonal headed bolt and nut with washer (assembly). 16 Hrs			
Part - B			
Assembly Drawings Solids of Protrusion, Assembly drawing of following machine parts (3D parts to be created and assemble and then getting 2D drawing with required views, including part drawing). Introduction to geometrical dimensioning and tolerance. <ol style="list-style-type: none">1. Screw Jack2. I.C. Engine Connecting Rod3. Plummer Block4. Machine Vice 14 Hrs			
Case study <ol style="list-style-type: none">1. Identify the engineering drawings symbols using GD and T.2. Assembly drawing of fuel injector, knuckle joint, cotter joint and riveted joints.3. Preparing Bill of Materials for mechanical system.

EMPLOYABILITY ENHANCEMENT SKILLS - III [As per Choice Based Credit System (CBCS) & OBE Scheme] SEMESTER – III			
Course Code:	P22HSMC307	Credits:	01
Teaching Hours/Week (L:T:P)	0:2:0	CIE Marks:	50
Total Number of Teaching Hours:	30	SEE Marks:	50
Course Learning Objectives: This course will enable the students to: <ul style="list-style-type: none">• Calculations involving percentages, profit & loss and discounts.• Explain concepts behind logical reasoning modules of direction sense and blood relations.• Prepare students for Job recruitment process and competitive exams.• Develop Problem Solving Skills.• Apply programming constructs of C language to solve the real-world problem.			
UNIT – I			06 Hours
Quantitative Aptitude: Number System – Divisibility & Remainder, Multiples & Factors, Integers, HCF & LCM, Decimal Fractions, Surds & Indices, Simplification.			
Self-study component:	Linear equations.		
UNIT – II			06 Hours
Quantitative Aptitude: Percentages, Profits, Loss and Discounts. Logical Reasoning: Blood Relations.			
Self-study component:	Inferred meaning, Chain rule.		
UNIT – III			06 Hours
Logical Reasoning: Direction Sense Test. Verbal Ability: Change of Speech and Voice, Sentence Correction.			
Self-study component:	Height & distance.		
UNIT – IV	C-PROGRAMMING - I		06 Hours
Introduction: Keywords and Identifier, Variables and Constants, Data Types, Input/Output, Operators, Simple Programs. Flow Control: If...else, for Loop, while Loop, break and continue, switch...case, goto, Control Flow Examples, Simple Programs. Functions: Functions, User-defined Functions, Function Types, Recursion, Storage Class, Programs Arrays: Arrays, Multi-dimensional Arrays, Arrays & Functions, Programs.			
Self-study component:	Evaluation of Expression.		
UNIT – V	C-PROGRAMMING - II		06 Hours
Pointers: Pointers, Pointers & Arrays, Pointers and Functions, Memory Allocation, Array & Pointer Examples. Strings: String Functions, String Examples, Programs. Structure and Union: Structure, Struct & Pointers, Struct & Function, Unions, Programs. Programming Files: Files Input/output			
Self-study component:	Error handling during I/O operations.		

Course Outcomes: On completion of this course, students are able to:

COs	Course Outcomes with <i>Action verbs</i> for the Course topics	Bloom's Taxonomy Level	Level Indicator
CO1	Exhibit amplified level of confidence to express themselves in English.	Applying	L3
CO2	Solve the problems based on Number systems, percentages, profit & loss and discounts.	Analyzing	L4
CO3	Solve logical reasoning problems based on direction sense and blood relations.	Analyzing	L4
CO4	Apply suitable programming constructs of C language and / or suitable data structures to solve the given problem.	Applying	L3

BIOLOGY FOR ENGINEERS			
[As per Choice Based Credit System (CBCS) & OBE Scheme]			
SEMESTER – III			
Course Code:	P22BFE308	Credits:	02
Teaching Hours/Week (L:T:P)	2:0:0	CIE Marks:	50
Total Number of Teaching Hours:	25	SEE Marks:	50
Course Learning Objectives:			
The objectives of this course are to,			
<ul style="list-style-type: none">➤ Familiarize the students with the basic biological concepts and their engineering applications.➤ Enable the students with an understanding of bio-design principles to create novel devices and structures.➤ Provide the students an appreciation of how biological systems can be re-designed as substitute products for natural systems.➤ Motivate the students to develop the interdisciplinary vision of biological engineering.			
Course Content			
Biomolecules And Their Applications (Qualitative): Carbohydrates (cellulose-based water filters, PHA and PLA as bio-plastics), Nucleic acids (DNA Vaccine for Rabies and RNA vaccines for Covid19, Forensics – DNA fingerprinting), Proteins (Proteins as food – whey protein and meat analogs, Plant based proteins), lipids (bio-diesel, cleaning agents/detergents), Enzymes (glucose-oxidase in bio-sensors, lingolytic enzyme in bio-bleaching).			
5Hrs			
UNIT-II			
Human Organ Systems And Bio-Designs-1 (Qualitative): Brain as a CPU system (architecture, CNS and Peripheral Nervous System, signal transmission, EEG, Robotic arms for prosthetics, Engineering solutions for Parkinson’s disease), Heart as a pump system (architecture, electrical signaling - ECG monitoring and heart related issues, reasons for blockages of blood vessels, design of stents, pace makers, defibrillators).			
5Hrs			
UNIT-III			
HUMAN ORGAN SYSTEMS AND BIO-DESIGNS-2 (QUALITATIVE): Lungs as purification system (architecture, gas exchange mechanisms, spirometry, abnormal lung physiology - COPD, Ventilators, Heart-lung machine), Kidney as a filtration system (architecture, mechanism of filtration, CKD, dialysis systems).			
5Hrs			
UNIT-IV			
Nature Bio Inspired Materials And Mechanisms (Qualitative): Echolocation (ultra sonography, sonars), Photosynthesis (photovoltaic cells, bionic leaf). Bird flying (GPS and aircrafts).			
5Hrs			
UNIT-V			
Trends In Bio- Engineering (Qualitative): DNA origami and Bio-computing, Bio-imaging and Artificial Intelligence for disease diagnosis, Self healing Bio-concrete (based on bacillus spores, calcium lactate nutrients and bio-mineralization processes), Bio-remediation and Bio-mining via microbial surface adsorption (removal of heavy metals like Lead, Cadmium, Mercury, Arsenic).			
5Hrs

Course Outcomes

At the end of the course, students will be able to,

1. **Understand** the bio-design principles involved in building novel devices and structures.
2. **Elucidate** the basic biological concepts through relevant industrial/Engineering application.
3. **Apply** innovative bio based solutions solving socially relevant problems.

Course Articulation Matrix

Course Outcomes		Program Outcomes												
		1	2	3	4	5	6	7	8	9	10	11	12	
CO1	Understand the bio-design principles involved in building novel devices and structures.	2	1				1	1	1					1
CO2	Elucidate the basic biological concepts through relevant industrial application.	2	1				1	1	1					1
CO3	Apply innovative bio based solutions solving socially relevant problems.	2	2				2	2	1					2

Blooms Level	Marks Weightage	Maps Course Outcome to the Corresponding Blooms Level
Understand/Elucidate	50-60%	
Apply	35-50%	

NATIONAL SERVICE SCHEME [As per Choice Based Credit System (CBCS) & OBE Scheme] SEMESTER - III			
Course Code:	P22NSS309/409	Credits:	00
Teaching Hours/Week (L:T:P):	0:0:2	CIE Marks:	100
Total Number of Teaching Hours:	-	SEE Marks:	-
Pre-requisites to take this Course: <ol style="list-style-type: none">1. Students should have a service oriented mind set and social concern.2. Students should have dedication to work at any remote place, anytime with available resources and proper time management for the other works.3. Students should be ready to sacrifice some of the time and wishes to achieve service oriented targets on time.			
Course Objectives :National Service Scheme (NSS) will enable the students to: <ol style="list-style-type: none">1. Understand the community in which they work2. Identify the needs and problems of the community and involve them in problem-solving3. Develop among themselves a sense of social & civic responsibility & utilize their knowledge in finding practical solutions to individual and community problems4. Develop competence required for group-living and sharing of responsibilities & gain skills in mobilizing community participation to acquire leadership qualities and democratic attitudes5. Develop capacity to meet emergencies and natural disasters & practice national integration and social harmony			
Content			
<ol style="list-style-type: none">1. Organic farming, Indian Agriculture (Past, Present and Future) Connectivity for marketing.2. Waste management– Public, Private and Govt organization, 5 R's.3. Setting of the information imparting club for women leading to contribution in social and economic issues.4. Water conservation techniques – Role of different stakeholders– Implementation.5. Preparing an actionable business proposal for enhancing the village income and approach for implementation.6. Helping local schools to achieve good results and enhance their enrolment in Higher/ technical/ vocational education.7. Developing Sustainable Water management system for rural areas and implementation approaches.8. Contribution to any national level initiative of Government of India. Foreg. Digital India, Skill India, Swachh Bharat, Atmanirbhar Bharath, Make in India, Mudra scheme, Skill development programs etc.9. Spreading public awareness under rural outreach programs.(minimum5 programs).10. Social connect and responsibilities.11. Plantation and adoption of plants. Know your plants.12. Organize National integration and social harmony events /workshops /seminars. (Minimum 02 programs).13. Govt. school Rejuvenation and helping them to achieve good infrastructure.			

AND

ONENSS – CAMP @ College /University /State or Central Govt Level /NGO's /General Social Camps

Students have to take up any activity on the above said topics and have to prepare content for awareness and technical contents for implementation of the projects and have to present strategies for implementation of the same. Compulsorily students have to attend one camp.

CIE will be evaluated based on their presentation, approach and implementation strategies.

Course Outcomes: After completing the course, the students will be able to

CO1:	Understand the importance of his / her responsibilities towards society.
CO2:	Analyze the environmental and societal problems/issues and will be able to design solutions for the same.
CO3:	Evaluate the existing system and to propose practical solutions for the same for sustainable development.
CO4:	Implement government or self-driven projects effectively in the field.

 1. Bhujangasana
 2. Shalabhasana
- d. Supine line
 1. Utthitadvipadasana
 2. Ardhalasana

Additional Mathematics - I [As per Choice Based Credit System (CBCS) & OBE Scheme] SEMESTER – III (Lateral Entry: Common to all branches)			
Course Code:	P22MDIP301	Credits:	00
Teaching Hours/Week (L:T:P):	2-2-0	CIE Marks:	100
Total Number of Teaching Hours:	40	SEE Marks:	-
Course Learning Objectives: The mandatory learning course P21MATDIP31 viz., Additional Mathematics-I aims to provide basic concepts of complex trigonometry, vector algebra, differential & integral calculus, vector differentiation and various methods of solving first order differential equations.			
UNIT-I			
Complex Trigonometry: Complex Numbers: Definitions & properties. Modulus and amplitude of a complex number, Argand's diagram, De-Moivre's theorem (without proof). Vector Algebra: Scalar and vectors. Vectors addition and subtraction. Multiplication of vectors (Dot and Cross products). Scalar and vector triple products-simple problems Self-study components: De-Moivre's theorem (without proof). Roots of complex number - Simple problems.			12Hrs
UNIT-II			
Differential Calculus: Polar curves –angle between the radius vector and the tangent pedal equation- Problems. Taylors series and Maclaurin's series expansions- Illustrative examples. Partial Differentiation: Elementary problems. Euler's theorem for homogeneous functions of two variables. Total derivatives-differentiation of composite and implicit function. Self-study components: Review of successive differentiation. Formulae for n th derivatives of standard functions- Leibnitz's theorem (without proof). Application to Jacobians, errors & approximations.			10Hrs
UNIT-III			
Integral Calculus: reduction formulae for $\sin^n x$, $\cos^n x$, and $\sin^m x \cos^m x$ and evaluation of these with standard limits-Examples. Applications of integration to area, length of a given curve, volume and surface area of solids of revolution. Self-study components: Differentiation under integral sign (Integrals with constants limits)- Simple problems.			10Hrs
UNIT-IV			
Vector Differentiation: Differentiation of vector functions. Velocity and acceleration of a particle moving on a space curve. Scalar and vector point functions. Gradient, Divergence, Curl and Laplacian (Definitions only). Self-study components: Solenoidal and irrotational vector fields-Problems.			10Hrs
UNIT - V			
Ordinary differential equations (ODE's): Introduction-solutions of first order and first degree differential equations: homogeneous, exact, linear differential equations of order one and equations reducible to above types. Self-study components: Applications of first order and first degree ODE's - Orthogonal trajectories of Cartesian and polar curves. Newton's law of cooling, R-L circuits- Simple illustrative examples from engineering field.			10Hrs

Course Outcomes: After completing the course, the students will be able to	
CO1:	Demonstrate the fundamental concepts –in complex numbers and vector algebra to analyze the problems arising in related area of engineering field.
CO2:	Identify – partial derivatives to calculate rate of change of multivariate functions
CO3:	Apply - the acquired knowledge of integration and differentiation to evaluate double and triple integrals to compute length surface area and volume of solids of revolution and identify velocity, acceleration of a particle moving in a space
CO4:	Find analytical solutions by solving first order ODE's which arising in different branches of engineering.

Additional Communicative English – I [As per Choice Based Credit System (CBCS) & OBE Scheme] SEMESTER – III				
Course Code:	P22HDIP307	Credits:	00	
Teaching Hours/Week (L:T:P):	0:2:0	CIE Marks:	100	
Total Number of Teaching Hours:	40	SEE Marks:	-	
Module-1				
Introduction to Communication Skills			6 Hours	
Introduction to communication, Meaning and process, Channels of communication, Elements of communication, Barriers to effective communication. Activities - Making introductions, Sharing personal information, Describing feelings and opinions.				
Module-2				
Listening Skills I			4 Hours	
Hearing vs. Listening, Types of listening, Determinants of good listening, Active listening process, Barriers to listening, Activities - Listening for pronunciation practice, Listening for personal communication, Listening for communication - language functions				
Module-3				
Speaking Skills I			6 Hours	
Basics of speaking, Elements and Functions of speaking, Structuring your speech, Focusing on fluency, Homographs and Signpost words. Activities – Free Speech and Pick and Speak				
Module-4				
Reading Skills I			4 Hours	
Developing reading as a habit, Building confidence in reading, improving reading skills, Techniques of reading - skimming and scanning. Activities - understanding students' attitudes towards reading, countering common errors in reading, developing efficiency in reading.				
Writing Skills I				4 Hours
Improving writing skills, Spellings and punctuation, Letter and Paragraph writing. Activity – Writing your personal story				
Module-5				
Body Language and Presentation Skills			6 Hours	
Elements of body language, Types, Adapting positive body language, Cultural differences in body language. 4 Ps in presentations, Overcoming the fear of public speaking, Effective use of verbal and nonverbal presentation techniques. Activity – Group presentations				
Course Outcomes: On completion of this course, students will be able to,				
CO 1: Understand the role of communication in personal and professional success				
CO 2: Comprehend the types of technical literature to develop the competency of students to apprehend the nature of formal communication requirements.				
CO 3: Construct grammatically correct sentences to strengthen essential skills in speaking & writing and to develop critical thinking by emphasizing cohesion and coherence				
CO 4: Demonstrate effective individual and teamwork to accomplish communication goals.

APPLIED MATHEMATICAL METHODS [As per Choice Based Credit System (CBCS) & OBE Scheme] SEMESTER – IV (COMMON TO CV, ME, IP, AU)			
Course Code:	P22MA401A	Credits:	03
Teaching Hours/Week (L:T:P):	2-2-0	CIE Marks:	50
Total Number of Teaching Hours:	40	SEE Marks:	50
Course Learning Objectives:			
1	Familiarize the importance of calculus of complex functions associated in dual plane, best fit curves and regression lines, random variables and probability distributions, solutions of ordinary differential equations by using power series.		
2	Apply C-R equations to find analytic, potential, stream functions, evaluate complex integrals, properties of regression lines, probability functions to analyse distributions, solve differential equations by power series method.		
Course Learning Objectives:			
Unit	Syllabus content	No. of hours	
		Theory	Tutorial
I	<p>Calculus of complex functions: Introduction to complex variables. Definitions- limit, continuity, differentiability and Analytic functions of $f(z)$: Cauchy- Riemann equations in Cartesian and polar forms (no proof)-Harmonic function and Problems. Applications to flow problems. Construction of analytic functions when u or v or $u \pm v$ are given- Milne-Thomson method. Conformal transformations: Introduction. Discussion of transformations for $W = z^2, W = e^z, W = z + 1/z, z \neq 0$ Self-Study: Derivation of Cauchy- Riemann equation in Cartesian and polar form</p>	06	02
II	<p>Complex integration: Bilinear Transformations- Problems, line integrals of complex function. Cauchy's theorem, Cauchy's integral formula. Taylor's and Laurent's series (Statements only)- illustrative examples. Singularities, poles and residues with examples, Cauchy's Residues Theorem (statement only)- Illustrative examples. Self-Study:– Contour integration Type-I & Type-II problems</p>	06	02
III	<p>Statistical Methods: Statistics: Brief review of measures of central tendency and dispersion. Moments, skewness and kurtosis. Curve Fitting: Curve fitting by the method of least squares, fitting the curves of the forms $y = ax + b, y = ab^x$ and $y = ax^2 + bx + c$. Correlation and regression: Karl Pearson's coefficient of correlation and rank correlation- problems, Regression analysis, lines of regression and problems. Self-Study: Fit a curve of the form $y = a + bx, y = a + bx + cx^2$</p>	06	02
IV	<p>Probability and Distribution: Random variables and Probability Distributions: Review of random variables. Discrete and continuous random variables-problems. Binomial, Poisson, Exponential and Normal distributions (with usual notation of mean and variance)-: problems.</p>	06	02

	Joint Probability Distributions : Introduction, Joint probability and Joint distribution of discrete random variables and continuous random variables Self-study: Geometric and Gamma distributions- problems.		
V	Special functions: Power series solution of a second order ODE, Series solution-Frobenius method. Series solution of Bessel's differential equation leading to $J_n(x)$. Expansions for $J_{\frac{1}{2}}(x)$ and $J_{-\frac{1}{2}}(x)$. Series solutions of Legendre's differential equation leading to $P_n(x)$ - Legendre's polynomials - simple illustrative examples Self study: Basics of Series solutions of ODE's; <u>analytic</u> , singular point and basic recurrence relations.	06	02

COURSE OUTCOMES: On completion of the course, student should be able to:	
CO1	Understand fundamental concepts in calculus of complex functions, statistics, probability and special functions.
CO2	Apply tools taught to analyze transformations arising in engineering field and evaluate complex integrals and draw statistical inferences
CO3	Analyze problems in engineering field by employing special functions, complex functions and statistical methods.
CO4	Evaluate integrals of complex functions, regression and correlation coefficient, probability of a discrete and continuous variable, series solution of special differential equations.

TEACHING - LEARNING PROCESS: Chalk and Talk, power point presentation, animations, videos.

Theory of Machines [As per Choice Based Credit System (CBCS) & OBE Scheme] SEMESTER – IV			
Course Code: P21AU402	Semester: IV	L-T-P: 3-0-0	Credits: 03
Contact Period-Lecture: 40Hrs.	Exam: 3Hrs.	Weightage: CIE:50 %;	SEE: 50%
Prerequisites: The students should have undergone the course on basic concept on mechanisms and Elements of Mechanical Engineering.			
Course Content			
UNIT-I			
Introduction: Definitions - Link or element, kinematic pairs, degrees of freedom, Kinematic chain, Mechanism, structure, Mobility of Mechanism, Inversion, Machine. KINEMATIC CHAINS AND INVERSIONS: Inversions of Four bar chain - Single slider crank chain and Double slider crank chain. Intermittent Motion mechanisms – Geneva mechanism and Ackerman steering gear mechanism. 09 Hours			
Self-study component: Uses of different inversions of mechanisms and its applications			
UNIT-II			
Velocity and Articulation Analysis of Mechanism: Introduction to vectors, Absolute and relative motions, motions of a link, velocity analysis by relative velocity method, four-link mechanism, slider crank mechanism. Static force analysis: Equilibrium of two forces, three forces and four force members, members with two forces and couple, free body diagrams, static force analysis of single slider-crank mechanism, quick return motion mechanism 09 Hours			
Self-study component: Static force analysis considering friction.			
UNIT-III			
Friction: Definition, Types of friction, Laws of Static and Dynamic, Co-efficient of Friction, Friction between sliding pair and turning pairs Cams: Types of cams, types of followers, follower motions including SHM, uniform velocity, uniform acceleration and retardation and cycloidal motion. Disc cam with reciprocating follower having knife edge roller and flat faced follower. Displacement diagram and cam profile for IC engine 08 Hour			
Self-study component: Application and uses of Cams			
UNIT-IV			
Balancing of Rotating Masses: Static and dynamic balancing, balancing of single rotating mass in same plane and in different planes. Balancing of several masses rotating in same plane and in different planes. (Both Analytical and Graphical method) 07 Hours			
Self-study component: Concept of static and dynamic loads			
UNIT-V			
Governors: Types of governors; force analysis of porter Governor, Hartnell Governor, controlling force, stability and sensitiveness. Gyroscopic Effects and Gyroscope: Introduction, Spinning and Precision, Gyroscopic Couple, Effect of Gyroscopic couple on the stability of Automobile Vehicles(Four Wheelers and Two Wheelers). Simple Problems. 07Hours			
Self-study component: Applications and uses of gyroscopic couple in industry			

P.E.S. College of Engineering, Mandya
Department of Automobile Engineering

Text Books

1. Rattan S.S, “Theory of Machines”, Tata McGraw-Hill Publishing Company Ltd., New Delhi, 2nd edition -2005.
2. Thomas, Bevan, “Theory of Machines”, CBS Publications.

Reference Books

1. Shigley. J. V. and Uickers, J.J., “Theory of Machines & Mechanisms”, OXFORD University press - 2004
2. R.K Bansal, “Theory of Machines”, S. Chand; 14th Revised edition, 1st 2005)
3. R.S.Khurmi, “Theory of Machines”

Course Outcomes: At the end of the course, students will be able to,

1. Calculate mobility (number of degrees-of-freedom) and enumerate rigid links and types of joints within mechanisms, and to Understand gear mechanism classification and to become familiar with gear standardization and specification in design.
2. Explain Terminology of gears and Importance of gear trains and their practical applications.
3. Know uses and advantages of belt drives Types and their nomenclature, Relationship between belt tensions commonly used design parameters.
4. Draw inversions and determine velocity and acceleration of different mechanisms, and to Calculate loss of power due to friction in various machine elements and Importance of Governors.
5. Explain Gyroscopic Effects and Gyroscope in automobile sector.

MECHANICS OF MATERIALS [As per Choice Based Credit System (CBCS) & OBE Scheme] SEMESTER – IV			
Course Code: P21AU403	Semester: IV	L-T-P: 3-0-0	Credits: 03
Contact Period - Lecture: 40 Hrs.	Exam: 3 Hrs.	Weightage: CIE:50%;	SEE:50%
Course Learning Objectives: The objectives of this course are to, <ul style="list-style-type: none">• Understand the basic concepts of stress, strain and deformation of mechanical elements subjected to axial, bending and torsional loads.• Analyze shear force, bending moment in beams and crippling load in columns.			
Course Content			
UNIT-I			
Simple stresses and strains: Stress, types, Saint Venant's principle, stress-strain curve for mild steel, working stress, proof stress, factor of safety, Hooke's law, modulus of elasticity, strain energy, proof resilience, longitudinal strain, lateral strain, poisson's ratio, stress strain analysis of bars of uniform cross section, stepped bars, circular bar with continuously varying section, principle of superposition. Modulus of rigidity, bulk modulus, relation among elastic constants. <p style="text-align: right;">7 Hrs</p> Self study component: Rectangular bar with continuously varying section, volumetric strain.			
UNIT-II			
Compound bars: Stress analysis of composite bars. Thermal stresses in uniform and compound bars. Compound stresses: Principal planes and stresses, plane of maximum shear stress in general 2D system. Mohr's circle diagram (2D). <p style="text-align: right;">8 Hrs</p> Self study component: Strain on inclined plane due to normal stress in X and Y directions.			
UNIT-III			
Shear force and Bending Moment Diagrams (SFD and BMD): Types of beams, loads and supports, shear force and bending moment, sign conventions, point of contraflexure, and relationship between load intensity, shear force and bending moment. SFD and BMD for different beams subjected to concentrated loads, uniformly distributed load, uniformly varying load and inclined loads. <p style="text-align: right;">8 Hrs</p> Self study component: Applications of beams.			
UNIT-IV			
Bending and shear stresses in Beams: Theory of simple bending, assumptions in simple bending, relationship between bending stresses and radius of curvature, relationship between bending moment and radius of curvature, section modulus. Bending stresses in beams of uniform section. Shearing stresses in beams, shear stress across rectangular, I and T sections. (Moment of Inertia to be provided for numerical problems). Deflection of Beams: Introduction, Differential equation of deflection; Flexural rigidity, Macaulay's method for simply supported beams with point load and UDL. <p style="text-align: right;">9 Hrs</p> Self study component: Beam of uniform strength-uniform beam of rectangular section replaced by beam of constant depth and width.			
UNIT-V			
Torsional stresses: Introduction to torsion, pure torsion, assumptions, derivation of torsional equation, polar modulus, torsional rigidity and torque transmitted by solid and hollow circular shafts. Columns: Introduction to Columns, Euler theory for axially loaded elastic long columns, Euler equation for columns with Both ends hinged and Both ends fixed, Limitations of Euler's theory, Rankine's formula. <p style="text-align: right;">8 Hrs</p>			

Self study component: Euler equation for one end fixed and other end is free, and one end fixed and the other end is hinged.

MANUFACTURING PROCESS-II [As per Choice Based Credit System (CBCS) & OBE Scheme] SEMESTER – IV			
Course Code: P21AU404	Semester: IV	L-T-P: 3-0-2	Credits: 04
Total Theory Teaching Hours: 40 Total Laboratory Hours: 24	Exam: 3 Hrs.	Weightage: CIE: 50 %;SEE: 50%	
Course Learning Objectives: The objectives of this course are to, <ul style="list-style-type: none">• Understand the basic metal forming processes of forging, rolling, extrusion, drawing, sheet metal forming and powder metallurgy.• Give complete insight regarding the mechanical equipment and operations involved to fulfil various applications.			
Course Content			
UNIT-I			
Introduction to Metal Working: Classification of metal working processes, characteristics of wrought products, advantages and limitations of metal working processes. Effect of parameters in metal forming process-Temperature, strain rate, friction and lubrication, hydrostatic pressure in metalworking, Deformation zone geometry, workability of materials, residual stresses in wrought products. <p style="text-align: right;">8 Hrs</p>			
Self study component: Concepts of biaxial and triaxial stresses, plane stress and plane strain.			
UNIT-II			
Forging and Rolling: Classification of forging processes, forging machines and equipments, Forging die-design parameters. Material flow lines in forging. Forging defects, Residual stresses in forging, advantages and disadvantages of forging. Classification of Rolling processes. Rolling mills, Defects in rolled products, Rolling variables roll camber. <p style="text-align: right;">8 Hrs</p>			
Self study component: Hand forging equipments and operations.			
UNIT-III			
Extrusion and Drawing: Types of Extrusion, Extrusion variables, Extrusion dies. Seamless tube extrusion, Lubrication in Extrusion, Deformation of metal flow in extrusion, Defects in extruded products. Drawing equipment, Elements of drawing Die, dead zone formation, drawing variables, Tube drawing-classification of tube drawing. <p style="text-align: right;">8 Hrs</p>			
Self study component: Extrusion of brittle metals.			
UNIT-IV			
Sheet Metal Forming: Sheet metal forming methods, Dies and Punches-classification of dies. Open back inclinable press, Limiting drawing ratio in drawing, Forming limit criterion, Defects in deep drawn products. High energy rate forming (HERF) - Explosive forming, electromagnetic forming, electro hydraulic forming. <p style="text-align: right;">8 Hrs</p>			
Self study component: Parameters affecting drawability.			
UNIT-V			
Powder Metallurgy: Basic steps in powder metallurgy, methods of powder production, Characteristics of metal powder. Conditioning and blending powders, Compacting metal powders, Sintering-sintering mechanism, Isostatic pressing, types of isostatic pressing, finishing operations of powder metallurgy parts, advantages, disadvantages and applications of powder metallurgy. <p style="text-align: right;">8 Hrs</p>			
Self study component: Safety and environmental aspects of powder metallurgy.			

Practical Content

24 Hrs

1. Use of forging tools and equipments.
2. Preparing model involving upsetting, drawing and bending operations, along with length and volume calculations.
 - i. Model-I
 - ii. Model-II
 - iii. Model-III
3. Use of sheet metal tools and equipments.
4. Preparing sheet metal model.
 - i. Model-I
 - ii. Model-II
 - iii. Model-III
5. Demonstration on extrusion honing process.
6. Demonstration of forming the parts from metallic powders.

MECHANICAL MEASUREMENTS AND METROLOGY
[As per Choice Based Credit System (CBCS) & OBE Scheme]
SEMESTER – IV

Course Code: P21AU405	Semester: IV	L-T-P: 3-0-2	Credits: 04
Total Theory Teaching Hours: 40	Exam: 3 Hrs.	Weightage: CIE:50% SEE:50%	
Total Laboratory Hours: 24			
Course Learning Objectives: The objectives of this course are to, <ul style="list-style-type: none">• The basic concepts of measurement and metrology, and strengthening their knowledge about advancements in system of limits, fits, tolerances and gauging of mechanical elements.• The various measuring equipment's and use of this in industry for quality inspection.			
Course Content			
UNIT-I			
Basic Concepts of Measurement and Metrology: Definition and significance of measurement, Generalized measurement system, Performance characteristics of measuring instruments (Only static characteristics), Inaccuracy of Measurements, Definition and objectives of metrology. Standards, Line and end standard, Wave length standard, Transfer from line to end standard. Slip gauges, Wringing phenomena, Numerical problems on building of slipgauges and calibration of end bars. <p style="text-align: right;">8 Hrs</p>			
Self study component: Imperial standard yard and International Prototype meter			
UNIT-II			
System of Limits, Fits, Tolerances and Gauging: Definition of tolerance, specification in assembly, Principle of interchangeability and selective assembly. Concept of limits of size and tolerances, Compound tolerances, accumulation of tolerances. Definition of fits, types of fits. Hole basis system and shaft basis system, Geometric dimensioning and tolerancing. Classification of gauges, Basic concept of design of gauges (Taylor's principles), wear allowance on gauges. Types of gauges -plain plug gauge, ring gauge, snap gauge, gauge materials, numerical problems on gauge design <p style="text-align: right;">8 Hrs</p>			
Self study component: Limit gauges for tapers.			
UNIT-III			
Comparators: Characteristics and classification of comparators. Mechanical comparators- Johnson Mikrokator, Sigma Comparators, Optical Comparators -principles, Zeiss ultra-optimizer, Electric and Electronic Comparators, LVDT, Pneumatic Comparators, Solex Comparator. Back Pressure gauges, Surface Roughness and Metrology of Screw Thread: Surface roughness terminology, Methods of measuring surface roughness, Taylor-Hobson Talysurf, Analysis of surface traces, Measurement of basic elements of thread, worked examples. <p style="text-align: right;">8 Hrs</p>			
Self study component: Measurements of alignment using Autocollimator			
UNIT-IV			
Transducers: Introduction, Transfer efficiency, classification of transducers. Mechanical Transducers: diaphragms, bellows. Electrical transducers: sliding contact resistive type, capacitive transducer, Piezo-Electric transducer. Signal Conditioning: Inherent problems in Mechanical systems, Electrical intermediate modifying devices, Input circuitry-simple current sensitive circuit, Electronic amplifiers, Filters, Types of filters, telemetry. <p style="text-align: right;">8 Hrs</p>			
Self study component: Applications of Transducers.			

UNIT-V

Strain Measurement: Methods of strain measurement, Strain gauges, Preparation and mounting of strain gauges. **Measurement of Force:** Introduction, Proving ring. **Measurement of Torque:** Introduction, Hydraulic dynamometer. **Measurement of Pressure:** Introduction, McLeod gauge, Pirani Gauge. **Temperature Measurement:** Thermocouple, Laws of thermocouple, Thermocouple materials.

8 Hrs

Self study component: Pyrometers, Optical pyrometers.

Practical Content

24 Hrs

1. Calibration of measuring instruments.
2. Measurement of angle using Sine bar and Sine Centre.
3. Measurements using Profile Projector.
4. Measurements using Toolmaker's Microscope.
5. Measurement of alignment using Autocollimator.
6. Calibration of LVDT.
7. Measurements of Surface roughness using Tally surf.
8. Mechanical Comparator.
9. Measurement of Screw threads parameters using floating carriage.
10. Measurement of cutting tool forces using drill tool Dynamometer.

Department of Automobile Engineering

Course Outcomes: At the end of the course, students will be able to,

1. **Apply** fundamentals of metrology and measurement
2. **Design** tolerances and fits for selected product quality
3. **Analyze** appropriate method and instruments for inspection of various mechanical systems.
4. **Make use of** experimental data for writing a report as an **individual** or as a **team** member to **communicate** effectively.

FLUID MEASUREMENT AND MACHINERY LABORATORY [As per Choice Based Credit System (CBCS) & OBE Scheme] SEMESTER – IV			
Course Code: P21AUL406	Semester: IV	L-T-P: 0-0-2	Credits: 1
Contact Period-Lecture: 30(P) Hrs.	Exam: 3 Hrs.	Weightage: CIE:50%; SEE:50%	
Course Learning Objectives: The objectives of this course are to, <ul style="list-style-type: none">• Understand the basic measurement techniques of fluid flow.• Evaluate the performance of vanes, turbines, pumps, compressor and blower.• Provide training to students to enhance their practical skills.• Develop team qualities and ethical principles.			
Course Content			
PART-A			10 Hrs
Exp-1 Calibration of Venturi meter and determination of its co-efficient of discharge.			
Exp-2 Calibration of Orifice meter and determination of its co-efficient of discharge.			
Exp-3 Calibration of V-Notch for flow through channel.			
Exp-4 Determination of coefficient of friction in flow through pipes.			
Exp-5 Determination of Vane efficiency (Coefficient of impact) for different vanes.			
PART-B			20 Hrs
Exp-6 Performance test on Pelton wheel Turbine.			
Exp-7 Performance test on Centrifugal Pump.			
Exp-8 Performance test on Reciprocating Pump.			
Exp-9 Performance test on Two Stage Reciprocating Air Compressor.			
Exp-10 Performance test on Air Blower.			
Reference Books

2. Dr. R.K.Bansal, “ Fluid mechanics and hydraulic machines ”, Laxmi publications Ltd., New Delhi, 9 th Edition, 2015, ISBN: 9788131808153.			
Course Outcomes: At the end of the course, students will be able to,			
1. Apply Bernoulli’s principle to determine flow rate, pressure changes for flow through pipes and examine the fluid flow rate in an open channel.			
2. Compare the effect of friction in pipes of different materials.			
3. Analyse the performance parameters of vanes, turbine, pumps, compressor and blower.			
4. Make use of experimental data for writing a report as an individual or as a team member to communicate effectively.

EMPLOYABILITY ENHANCEMENT SKILLS - IV [As per Choice Based Credit System (CBCS) & OBE Scheme] SEMESTER – IV for Civil, Mech, IP & Automobile Branches only			
Course Code:	P22HSMC407A	Credits:	01
Teaching Hours/Week (L:T:P)	0:2:0	CIE Marks:	50
Total Number of Teaching Hours:	30	SEE Marks:	50
Course Learning Objectives: This course will enable the students to: <ul style="list-style-type: none">• Calculations involving simple and compound interest, averages, alligations & mixtures, proportions, variations and partnership.• Explain concepts behind logical reasoning modules of series, coding & decoding, seating and data arrangements.• Develop problem solving through Python language.			
UNIT – I			06 Hours
Quantitative Aptitude: Simple and Compound Interest, Averages. Logical Reasoning: Series, Coding & Decoding.			
Self-study component:	Mensuration		
UNIT – II			06 Hours
Quantitative Aptitude: Alligations and Mixtures, Ratios, Proportions and Variations. Logical Reasoning: Seating Arrangement, Data Arrangement.			
Self-study component:	Types of cryptarithm		
UNIT – III			06 Hours
Quantitative Aptitude: Partnership. Verbal Ability: Sentence Completion, Ordering of Sentences.			
Self-study component:	Game based assessments		
UNIT – IV	PYTHON - I		06 Hours
Python Basics: The print statement, Comments, Python Data Structures and Data Types, String Operations in Python, Simple Input & Output, Simple Output Formatting, Operators in Python Python Program Flow: Indentation, The If statement and its' related statement, An example with if and it's related statement, The while loop, The for loop, The range statement, Break & Continue, Assert, Examples for looping. Functions and Modules: Create your own functions, Function parameters, Variable Arguments, Scope of a Function, Function Documentations, Lambda Functions & map, n Exercise with functions, Create a Module, Standard Modules.			
Self-study component:	List-like types		

UNIT – V	PYTHON - II	06 Hours	
Exceptions Handling: Errors, Exception handling with try, handling Multiple Exceptions, Writing your own Exception. File Handling: File handling Modes, Reading Files, Writing & Appending to Files, Handling File Exceptions, The with statement. Classes in Python: New Style Classes, Creating Classes, Instance Methods, Inheritance, Polymorphism, Exception Classes & Custom Exceptions. Generators and Iterators: Iterators, Generators, The Functions any and all, With Statement, Data Compression			
Self-study component:	Debugging		
Course Outcomes: On completion of this course, students are able to:			
COs	Course Outcomes with <i>Action verbs</i> for the Course topics	Bloom's Taxonomy Level	Level Indicator
CO1	Solve the problems based on simple and compound interests, averages, alligations & mixtures, ratios, proportions, variations and partnerships.	Applying	L3
CO2	Solve logical reasoning problems based on seating arrangements, data arrangement and verbal ability skills of sentence corrections and ordering of sentences.	Applying	L3
CO3	Apply suitable programming constructs of Python language and / or suitable data structures to solve the given problem.	Analyzing	L4
CO4	Design and Develop solutions to problems using functions.	Analyzing	L4

Internship - I			
[As per Choice Based Credit System (CBCS) & OBE Scheme]			
SEMESTER – IV			
Course Code:	P22INT409	Credits:	02
Teaching Hours/Week (L:T:P):	0:0:2	CIE Marks:	-
Total Number of Teaching Hours:	-	SEE Marks:	100
<p>All the students registered to II year of BE shall have to undergo a mandatory internship of 02 weeks during the intervening vacation of II and III semesters or III and IV semester. Internship shall include Inter / Intra Institutional activities. A Semester End Examination (Presentation followed by question-answer session) shall be conducted during IV semester and the prescribed credit shall be included in IV semester. The internship shall be considered as a head of passing and shall be considered for the award of degree. Those, who do not take up / complete the internship shall be declared fail and shall have to complete during subsequent Semester End Examination after satisfying the internship requirements. (The faculty coordinator or mentor has to monitor the students' internship progress and interact to guide them for the successful completion of the internship.)</p>			

PHYSICAL EDUCATION [As per Choice Based Credit System (CBCS) & OBE Scheme] SEMESTER - IV			
Course Code:	P22PED409	Credits:	00
Teaching Hours/Week (L:T:P):	0:0:2	CIE Marks:	100
Total Number of Teaching Hours:	-	SEE Marks:	-
Fitness Components	Track Events		
Athletics Track- Sprints Jumps- Long Jump Throws- Shot Put	1.1. Starting Techniques: Standing start and Crouch start (its variations) use of Starting Block. 1.2. Acceleration with proper running techniques. 1.3. Finishing technique: Run Through, Forward Lunging and Shoulder Shrug. Long Jump: Approach Run, Take-off, Flight in the air (Hang Style/Hitch Kick) and Landing Shot put: Holding the Shot, Placement, Initial Stance, Glide, Delivery Stance and Recovery (Perry O'Brien Technique).		
Kho kho	A. Fundamental skills <ol style="list-style-type: none"> 1. Service: Under arm service, Side arm service, Tennis service, Floating service. 2. Pass: Under arm pass, Over head pass. 3. Spiking and Blocking. 4. Game practice with application of Rules and Regulations B. Rules and their interpretation and duties of officials.		
Throw ball Athletics Track- 110 & 400 Mtrs Hurdles Jumps- High Jump Throws- Discuss Throw	A. Fundamental skills: Overhand service, Side arm service, two hand catching, one hand overhead return, side arm return. B. Rules and their interpretations and duties of officials 110 Mtrs and 400Mtrs: Hurdling Technique :Lead leg Technique, Trail leg Technique ,Side Hurdling, Over the Hurdles Crouch start (its variations) use of Starting Block. Approach to First Hurdles, In Between Hurdles, Last Hurdles to Finishing. High jump: Approach Run, Take-off, Bar Clearance (Straddle) and Landing. Discus Throw: Holding the Discus, Initial Stance Primary Swing, Turn, Release and Recovery (Rotation in the circle).		

YOGA [As per Choice Based Credit System (CBCS) & OBE Scheme] SEMESTER - IV			
Course Code:	P22YOG409	Credits:	00
Teaching Hours/Week (L:T:P):	0:0:2	CIE Marks:	100
Total Number of Teaching Hours:	-	SEE Marks:	-
Course objectives: 6) To enable the student to have good health. 7) To practice mental hygiene. 8) To possess emotional stability. 9) To integrate moral values. 10) To attain higher level of consciousness.			
The Health Benefits of Yoga The benefits of various yoga techniques have been supposed to improve <ul style="list-style-type: none">• body flexibility,• performance,• stress reduction,• attainment of inner peace, and• self-realization. The system has been advocated as a complementary treatment to aid the healing of several ailments such as <ul style="list-style-type: none">• coronary heart disease,• depression,• anxiety disorders,• asthma, and• extensive rehabilitation for disorders including musculoskeletal problems and traumatic brain injury. The system has also been suggested as behavioral therapy for smoking cessation and substance abuse (including alcohol abuse). If you practice yoga, you may receive these physical, mental, and spiritual benefits: <ul style="list-style-type: none">• Physical<ul style="list-style-type: none">10. Improved body flexibility and balance11. Improved cardiovascular endurance (stronger heart)12. Improved digestion13. Improved abdominal strength14. Enhanced overall muscular strength15. Relaxation of muscular strains16. Weight control17. Increased energy levels18. Enhanced immune system• Mental<ul style="list-style-type: none">4. Relief of stress resulting from the control of emotions			

5. Prevention and relief from stress-related disorders
6. Intellectual enhancement, leading to improved decision-making skills
 - Spiritual
4. Life with meaning, purpose, and direction
5. Inner peace and tranquility
6. Contentment

Patanjali's Ashtanga Yoga, its need and importance.

Yama :Ahimsa, satya, asteya, brahmacarya, aparigraha

Niyama :shoucha, santosh, tapa, svaadhyaya, Eshvarapranidhan

Suryanamaskar 12 count- 4 rounds of practice

Asana, Need, importance of Asana. Different types of asana. Asana its meaning by name, technique, precautionary measures and benefits of each asana

Different types of Asanas

- a. Sitting 1. Sukhasana
 - 2. Paschimottanasana
- b. Standing 1. Ardhakati Chakrasana
 - 2. Parshva Chakrasana
- c. Prone line 1. Dhanurasana
- d. Supine line 1. Halasana
 - 2. Karna Peedasana

Meaning, importance and benefits of Kapalabhati.

40 strokes/min 3 rounds

Meaning, Need, importance of Pranayama. Different types. Meaning by name, technique, precautionary measures and benefits of each Pranayama

- Pranayama – 1. Suryanuloma –Viloma 2. Chandranuloma-Viloma 3. Suryabhedana
4. Chandra Bhedana 5. Nadishodhana

Department of Automobile Engineering

Additional Mathematics - II [As per Choice Based Credit System (CBCS) & OBE Scheme] SEMESTER – IV (Lateral Entry: Common to all branches)			
Course Code:	P22MDIP401	Credits:	00
Teaching Hours/Week (L:T:P):	2-2-0	CIE Marks:	100
Total Number of Teaching Hours:	40	SEE Marks:	-
Course Objectives: The mandatory learning course: P21MATDIP401 viz., Additional Mathematics-II aims to provide essential concepts of linear algebra, introductory concepts of second & higher order differential equations along with various techniques/ methods to solve them, Laplace & inverse Laplace transforms and elementary probability theory.			
UNIT-I			
Linear Algebra: Introduction - Rank of matrix by elementary row operations - Echelon form of a matrix. Consistency of system of linear equations - Gauss elimination method. Gauss-Jordan and LU decomposition methods. Eigen values and Eigen vectors of a square matrix. Self-study Components: Application of Cayley-Hamilton theorem (without proof) to compute the inverse of a matrix-Examples.			10 Hrs
UNIT-II			
Higher order ODE's: Linear differential equations of second and higher order equations with constant coefficients. Homogeneous /non-homogeneous equations. Inverse differential operators. and variation of parameters. Solution of Cauchy's homogeneous linear equation and Legendre's linear differential equation. Self-study Components: Method of undetermined coefficients			14 Hrs
UNIT-III			
Multiple Integrals: Double and triple integrals-region of integration. Evaluation of double integrals by change of order of integration. Vector Integration: Vector Integration: Integration of vector functions. Concept of a line integrals, surface and volume integrals. Green's, Stokes's and Gauss theorems (without proof) problems. Self-study Components: Orthogonal curvilinear coordinates.			10 Hrs
UNIT-IV			
Laplace transforms: Laplace transforms of elementary functions. Transforms of derivatives and integrals, transforms of periodic function and unit step function-Problems only. Inverse Laplace transforms: Definition of inverse Laplace transforms. Evaluation of Inverse transforms by standard methods. Self-study Components: Application to solutions of linear differential equations and simultaneous differential equations..			12Hrs
UNIT-V			
Probability: Introduction. Sample space and events. Axioms of probability. Addition and multiplication theorems. Conditional probability – illustrative examples. Self-study Components: State and prove Bayes's theorem			06Hrs

Course Outcomes: After completing the course, the students will be able to	
CO1:	Apply matrix theory for solving systems of linear equations in the different areas of linear algebra.
CO2:	Solve second and higher order differential equations occurring in of electrical circuits, damped/un-damped vibrations.
CO3:	Identify - the technique of integration evaluate double and triple integrals by change of variables, and vector integration technique to compute line integral
CO4:	Explore the basic concepts of elementary probability theory and, apply the same to the problems of decision theory,

Text Book:

- B.S. Grewal: Higher Engineering Mathematics, Khanna Publishers, New Delhi, 43rd Ed., 2015.

Additional Communicative English - II [As per Choice Based Credit System (CBCS) & OBE Scheme] SEMESTER – IV			
Course Code:	P22HDIP407	Credits:	00
Teaching Hours/Week (L:T:P):	0:2:0	CIE Marks:	100
Total Number of Teaching Hours:	30	SEE Marks:	-
Module-1			
Listening Skills II			2 Hours
Levels of listening, Active listening, Techniques of listening. Activity: Listening for main ideas and Listening for specific information			
Speaking Skills II			6 Hours
Language of discussion – Giving opinion, agreeing / disagreeing, asking questions, making suggestions. Sentence stress – content and structure words, Speaking situations, Intonations and Summarizing skills			
Module-2			
Reading Skills II			2 Hours
Guessing meaning from the context, Understanding graphical information, Summarizing. Activity: Book review			
Writing Skills II			4 Hours
Linkers and connectives, Sentence and paragraph transformation, Mind mapping techniques, Letter writing, Essay writing			
Module-3			
Email Etiquette			4 Hours
Parts of an email, Writing an effective subject line, email language and tone. Activity: Email writing practice - Scenario based emails			
Group Presentations			2 Hours
Group presentations by the students			
Module-4			
Goal Setting			2 Hours
Defining goals, types of goals, Establishing SMART goals, Steps in setting goals, Goal setting activity			
Individual Presentations			4 Hours
Individual presentation by the students			
Module-5			
Teamwork			4 Hours
Defining teams, Team vs. Group, Benefits and challenges of working in teams, Stages of team building, Building effective teams, Case studies on teamwork			
Course Outcomes: On completion of this course, students will be able to,			
CO 1: Understand the role of communication in personal and professional success			
CO 2: Comprehend the types of technical literature to develop the competency of students to apprehend the nature of formal communication requirements.			
CO 3: Construct grammatically correct sentences to strengthen essential skills in speaking & writing and to develop critical thinking by emphasizing cohesion and coherence			
CO 4: Demonstrate effective individual and teamwork to accomplish communication goals.
