

SYLLABUS

(With effect from 2018-2019 Academic year)

V & VI Semester
Bachelor Degree
In

MECHANICAL ENGINEERING

Out Come Based Education
with
Choice Based Credit System

P.E.S. College of Engineering

Mandya - 571 401, Karnataka
(An Autonomous Institution Affiliated to VTU, Belagavi)
Grant -in- Aid Institution
(Government of Karnataka)
Accredited by NBA, New Delhi
Approved by AICTE, New Delhi.

Ph : 08232- 220043, Fax : 08232 – 222075, Web : www.pescemandya.org

Preface

PES College of Engineering, Mandya, started in the year 1962, has become autonomous in the academic year 2008-09. Since, then it has been doing the academic and examination activities successfully. The college is running Eight undergraduate and Eight Postgraduate programs. It consists of Six M.Tech programs, which are affiliated to VTU. Other postgraduate programs are MBA and MCA.

India has recently become a Permanent Member by signing the Washington Accord. The accord was signed by the National Board of Accreditation (NBA) on behalf of India on 13th June 2014. It enables not only the mobility of our degree globally but also establishes equivalence to our degrees with that of the member nations such as Taiwan, Hong Kong, Ireland, Korea, Malaysia, New Zealand, Russia, Singapore, South Africa, Turkey, Australia, Canada and Japan. Among other signatories to the international agreement are the US and the UK. Implementation of Outcome Based Education (OBE) has been the core issue for enabling the equivalence and of Indian degrees and their mobility across the countries.

Our Higher Educational Institution has adopted the CBCS based semester structure with OBE scheme and grading system.

The credit based OBE semester system provides flexibility in designing curriculum and assigning credits based on the course content and hours of teaching.

The OBE, emphasize setting clear standards for observable, measurable outcomes of programs in stages. There lies a shift in thinking, teaching and learning processes moving towards Students Centric from Teacher Centric education. OBE standards focus on mathematics, language, science, attitudes, social skills & moral values.

The key features which may be used to judge, if a system has implemented an outcome based education system is mainly Standard based assessments that determines whether students have achieved the stated standard. Assessments may take any form, so long as the process actually measure whether the student knows the required information or can perform the required task. Outcome based education is a commitment that all students of all groups will ultimately reach the same minimum standards. Outcome Based Education is a method or means which begins with the end in mind and constantly emphasizes continuous improvement.

Choice Based Credit System (CBCS) provides choice for students to select from the prescribed courses (core, Foundation, Foundation Elective, elective, open elective and minor or soft skill courses). The CBCS provides a 'cafeteria' type approach in which the students can Choose electives from a wide range of courses of their choice, learn at their own pace, undergo additional courses and acquire more than the required credits, adopt an interdisciplinary approach to learning which enables integration of concepts, theories, techniques, and, perspectives from two or more disciplines to advance fundamental understanding or to solve problems whose solutions are beyond the scope of a single discipline. These greatly enhance the skill/employability of students.

In order to increase the Industry/Corporate readiness, many Soft Skills and Personality Development modules have been added to the existing curriculum of the academic year 2015-16. Industry Interactions have been made compulsory to enhance the field experience. In order to enhance creativity and innovation Mini Project and Industrial visit & Interaction are included in all undergraduate programs

Dr. Umesh D R
Deputy Dean (Academic)
Assistant Professor,
Dept. of CS & Engg

Dr. Nagarathna
Dean (Academic)
Professor

Department of Mechanical Engineering

PES College of Engineering

Vision

“A leading institution imparting quality engineering and management education developing creative and socially responsible professionals”

Mission

Mission of P E S College of Engineering is to,

- Provide state of the art infrastructure, motivate the faculty to be proficient in their field of specialization and adopt best teaching-learning practices.
- Impart engineering and managerial skills through competent and committed faculty using outcome based educational curriculum.
- Inculcate professional ethics, leadership qualities and entrepreneurial skills to meet the societal needs.
- Promote research, product development and industry-institution interaction.

Department of Mechanical Engineering

ABOUT THE DEPARTMENT

The department of Mechanical Engineering was established in the year 1962 during the origination of the institute. The department was granted academic autonomy in the year 2009. The department presently offers B.E in Mechanical Engineering, M Tech in Computer Integrated Manufacturing (CIM), M Tech in Machine Design, M.Sc., (Engg.) by research and research leading to Ph.D. The present intake capacity of the department is 120 for BE, 18 for M Tech CIM and 24 for M Tech Machine Design. The department has a faculty-student ratio of 1:15 for UG courses and 1:12 for PG courses. The department has well established laboratories to meet the academic requirements of UG and PG programmes and a skilled technical faculty to train the students. The department has its own library which has a collection of about 3160 reference books.

The department regularly organizes industrial visits, technical lectures by experts from industries and institutes in contemporary areas to bridge the gap between syllabi and current developments. The students are encouraged to undergo industrial training as well as to take up industry oriented projects during their academic course. Mechanical Engineering Association, formed by the students and faculty of the department regularly organizes co-curricular and extracurricular activities for the students.

Vision

Be a department well recognized for its ability to develop competent mechanical engineers capable of working in global environment”

Mission

The Mission of the Department of Mechanical Engineering is to:

- Provide quality education by competent faculty.
- Provide adequate infrastructure and learning ambience for the development of essential technical skills.
- Inculcate a sense of higher education and research orientation.
- Foster industry interaction.

Programme Educational Objectives (PEOs)

The Department of Mechanical Engineering, PES College of Engineering, is dedicated to graduating mechanical engineers who:
PEO1: Use the fundamentals of basic science, mathematics and mechanical engineering, to pursue their career as engineers as well as to lead and manage teams in public and private sector organizations.
PEO2: Pursue advanced education, research and development and engage in the process of life-long learning.
PEO3: Develop their career as entrepreneurs in a responsible, professional and ethical manner to serve the society.

Programme Outcomes (POs)

By the time of graduation, students will have:	
1	Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2	Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3	Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4	Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5	Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6	The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7	Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9	Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10	Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11	Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12	Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Department of Mechanical Engineering

Programme Specific Outcomes (PSOs)

1	Apply computer simulation and experimental methods in the design and development of sustainable products/mechanical systems.
2	Utilize the knowledge of advanced manufacturing and condition monitoring techniques in industrial/practical applications.

EVALUATION SCHEME

Scheme	Weightage	Marks	Event Break Up				
<i>CIE</i>	50%	50	Test I	Test II	Quiz I	Quiz II	Assignment
			35	35	5	5	10
SEE	50%	100	Questions to Set: 10		Questions to Answer: 5		
Scheme of SEE Question Paper (100 Marks)							
Duration: 3Hrs			Marks: 100			Weightage: 50%	
<ul style="list-style-type: none">• Each of the two questions set shall be so comprehensive as to cover the entire contents of the unit.• There will be direct choice between the two questions within each Unit• Total questions to be set are 10. All carry equal marks of 20• The number of subdivisions in each main question shall be limited to three only• Number of questions to be answered by students is 5

Course Title: MANAGEMENT AND ENTREPRENEURSHIP			
Course Code: P18ME51	Semester: 05	L-T-P: 4-0-0	Credits: 04
Contact Period - Lecture: 52 Hrs	Exam: 3Hrs	Weightage %: CIE:50,SEE: 50	
<p>Course Objectives: The course aims at enabling the students to understand the basic concepts of Management, Principles of organization, organization theories, evolution of entrepreneur concept, Types and functions of entrepreneur, characteristics, importance of motivation and its kinds, project identification, preparation, selection and reporting.</p>			
Course Content			
Unit-1			
<p>Management: Introduction, meaning, nature and characteristics of management, scope and functional area of management, management as a science, art or profession, management & administration, role of management, levels of management, development of management thought, early and modern management approaches. 10 Hrs</p> <p>Self Study Component: Functions of Management</p>			
Unit-2			
<p>Organization Structure: Principles of organization, organization theories, departmentation, authority, power, organizing, organizational effectiveness, structuring the organization, organizational change, organization charts, types of organizations, Span of control, forms and functions of committees. 10 Hrs</p> <p>Self Study Component: Staffing, Stages in Recruitment</p>			
Unit-3			
<p>Entrepreneurship: meaning of entrepreneur, evolution of concept, functions of entrepreneur, types of entrepreneur, development of entrepreneurship, stages in entrepreneurial process, role of entrepreneurs in economic development, entrepreneurship in India, entrepreneurship and its barriers. 10 Hrs</p> <p>Self Study Component: Difference between manager and entrepreneurs.</p>			
Unit-4			
<p>Motivation, Job Analysis, Job Evaluation, Wages & Incentives: Introduction, characteristics, importance, kinds of motivation. Thoughts of motivation philosophy: Maslow's theory of needs, Gouglass Mc Gregore – 'X' & ' Y' theory, Herzberg's theory, Incentives as motivators, managing dissatisfaction and frustration. Job analysis, job description, job specification, job design: job evaluation, time recording, wage and incentives. Wages, methods of wage payment, incentives. Bonus system. Non financial incentives. Time rate v/s piece rate, fringe benefits, numericals. 12 Hrs</p> <p>Self Study Component: Differences between Job analysis and job evaluation, essentials of time recording in industry, time recording tools.</p>			
Unit-5			
<p>Projectology And Small Scale Industries (SSI): Meaning of a project, project identification, project preparation, project selection, project report, need and significance of a project report, contents, project planning, project monitoring and control, project evaluation, errors of a project report, project appraisal, project cycle and project phases. Identification of business opportunities: market, technical, financial and social feasibility study. Steps to start SSI, Government support to SSI. 10 Hrs</p> <p>Self Study Component: Effect of GATT, Liberalization/Privatization/Globalization (LPG) GST on industrial sector in India.</p>

Course Title: DYNAMICS OF MACHINERY			
Course Code: P18ME52	Sem: 05	L-T-P : 4:0:0	Credit: 04
Contact Period: Lecture: 52 Hrs	Exam: 3 Hrs	Weightage % : CIE- 50, SEE-50	
<p>Course objective: The course aims at enabling the students to understand the basic concepts of static and dynamic force analysis of simple mechanisms, flywheel analysis, balancing of rotating and reciprocating masses under the application of external load and analysis of gyroscopic couple.</p>			
Course Content			
Unit-1			
<p>Static force analysis: Introduction, Static equilibrium, Equilibrium of two force, three force and four force members, Members with two forces and torque, Free body diagrams, Static force analysis (graphical) of four bar mechanism and slider-crank mechanism without friction. 10 Hrs</p> <p>Self study component: Principle of Virtual work</p>			
Unit-2			
<p>Inertia force analysis: Introduction, D'Alembert's principle, Inertia force, inertia torque, dynamically equivalent systems, Correction couple, line of action of inertia force in a link, inertia force analysis of (i) four bar mechanism (ii) slider crank mechanism with known details of accelerations. 10 Hrs</p> <p>Self study component: Equivalent Dynamic System</p>			
Unit-3			
<p>Flywheels: Introduction, Turning moment diagrams, Fluctuation of Energy and speed, energy stored in a flywheel, determination of size of flywheels. Governors: Introduction, Types, working principle and application [without numericals]. 10 Hrs</p> <p>Self study component: Comparison between flywheels and Governors, and application of fly wheels</p>			
Unit-4			
<p>Balancing of rotating & reciprocating masses: Introduction, Static and dynamic balancing, Balancing of several masses revolving in the same plane, balancing of several masses revolving in different planes. Inertia force of the reciprocating mass of a slider crank mechanism, primary balancing, secondary balancing, balancing of single cylinder engine, balancing of multi cylinder-inline engine, balancing of radial engines. 12 Hrs</p> <p>Self study component: Comparison between inline and radial engine</p>			
Unit-5			
<p>Gyroscopes: Introduction, vectorial representation of angular motion, basic definitions, gyroscopic couple, Effect of gyroscopic couple on plane disc, aeroplane, ship, stability of two wheelers and four wheelers. 10 Hrs</p> <p>Self study component: Effect of gyroscopic couple on bearings (with numericals)</p>

Department of Mechanical Engineering

Course Title: DESIGN OF MACHINE ELEMENTS-I			
Course Code: P18ME53	Sem: 05	L-T-P3 : 4:0:0	Credit: 04
Contact Period: Lecture: 52 Hrs	Exam: 3 Hrs	Weightage % : CIE- 50, SEE-50	
Course objective: The course aims at enabling the students to understand the basic concepts of Machine element design and to design some of the commonly used machine elements.			
Course Content			
Unit-1			
<p>Basic design concept: Introduction, designation of Engineering Materials, design considerations, Basic procedure of design of machine elements, Mechanical properties of Engineering materials, Failure of brittle materials, Failure of ductile materials, Design criteria based on strength and rigidity, factor of safety, criteria for selection of factor of safety, design of simple machine members subjected to static loading (including eccentric load) [limited to biaxial stresses].</p> <p>Theories of failure: Maximum normal stress theory, Maximum shear stress theory, Distortion energy theory. Stress concentration: Stress concentration factor, design of simple elements with stress raisers Design of Cotter and Knuckle joints. 12 Hrs</p> <p>Self study component: Maximum strain theory [St. Venant's theory] of failure</p>			
Unit-2			
<p>Design against fatigue load: Introduction, types of fluctuating stresses, Low cycle fatigue, High cycle fatigue, Rotating beam bending test, S-N Diagram, endurance limit, endurance limit modifying factors: load, size and surface factors, Stress concentration effects; notch sensitivity, design for infinite life, combined steady and variable stress, Soderberg and Goodman relationship, stresses due to combined loading. Finite life design under completely reversed load. Impact loading: Impact stresses due to axial, bending and torsional loads, effect of inertia. 10 Hrs</p> <p>Self study component: Axial load fatigue test</p>			
Unit-3			
<p>Design of shafts: Introduction, shafts and axles, transmission shafts subjected to combined bending and twisting (including hollow shafts) based on strength and torsional rigidity, ASME code for shaft design. Design of Muff coupling and rigid flange coupling. 10 Hrs</p> <p>Self study component: Design against lateral rigidity</p>			
Unit-4			
<p>Threaded joints: Introduction, Stresses in threaded fasteners due to static loading, elastic analysis of bolted joints, initial tension in bolts, eccentrically loaded threaded joints. Power screws - Introduction, Types of screw threads, Design of Power Screws, efficiency, self-locking and over hauling. 10 Hrs</p> <p>Self study component: Differential and compound screws</p>			
Unit-5			
<p>Riveted joints – Introduction, methods of riveting, Types of rivets, rivet materials, types of riveted joints, failures of riveted joints, joint efficiency, design of boiler Joints.</p> <p>Welded joints - Introduction, types of welded joints, design of welded joints (butt joints, fillet welds, axially loaded unsymmetrical welded joints, eccentrically loaded welded joints). 10 Hrs</p> <p>Self study component: Diamond or Lozenge joint</p>

Department of Mechanical Engineering

Course Title: TURBOMACHINES			
Course Code: P18ME54	Sem: 05	L-T-P4 : 4:0:04	Credit: 04
Contact Period: Lecture: 52 Hrs	Exam: 3 Hrs	Weightage % : CIE- 50, SEE-50	
<p>Course objective: The course aims at to cover the basic principles, governing equations and applications of turbomachines and present an overall framework for the thermo – fluid dynamic design and performance analysis of turbomachines.</p>			
Course Content			
Unit-1			
<p>Energy Transfer in Turbo Machine: Definition of a turbo machine. Parts of a Turbo machine. Comparison with positive displacement machines, Classification of turbomachines, Euler Turbine equation, Alternate form of Euler turbine equation and components of energy transfer. Degree of reaction, general expression for degree of reaction. Utilization factor, relation between utilization factor and degree of reaction. Condition for maximum utilization in Impulse, reaction and 50% reaction turbines .Velocity triangles for different values of degree of reaction. Comparison of impulse and reaction turbines. 11 Hrs</p> <p>Self study component: Classification of Aero-Foil section Blade terminology</p>			
Unit-2			
<p>Impulse Hydraulic Turbines (Axial flow type): Classification of hydraulic turbines. Unit quantities and their significance. Pelton wheel and its Components. Velocity triangles and power. Effect of friction and condition for maximum efficiency. Design parameters and design of Pelton turbines. Turbine efficiencies and performance curves of Pelton wheel. 10 Hrs</p> <p>Self study component: Basis for selection of Hydraulic turbine.</p>			
Unit-3			
<p>Reaction Hydraulic Turbines (Radial flow Type): Francis turbine, types of reaction turbines, components of reaction turbine, velocity triangles, power and efficiency. Runner shapes for different blade speeds, design parameters and design of Francis turbine. Draft tube, types of draft tube, design of draft tube and functions of draft tube. Kaplan turbine, components, velocity triangles and design parameters. 10 Hrs</p> <p>Self study component: Places of installation of hydraulic turbines in India</p>			
Unit-4			
<p>Steam Turbines (Both Axial and radial flow type): Classification of steam turbines with examples. Impulse staging and need for compounding; Velocity compounding, Pressure compounding and Pressure-velocity compounding. Velocity triangles, power and efficiency for impulse turbine, condition for maximum utilization factor. Effect of friction and blade angles on blade efficiency. Impulse reaction and reaction turbines and condition for maximum efficiency. Reheat factor and stage efficiency. 11 Hrs</p> <p>Self study component: Internal losses in steam turbine.</p>			
Unit-5			
<p>Centrifugal Pumps: Centrifugal pumps, introduction and main part of the centrifugal pump. Work done and velocity triangles. Head developed, manometric head, suction head, delivery head and static head. Pump losses and efficiency. Minimum starting speed, net positive suction head, priming. Multistage centrifugal pumps and Cavitation in centrifugal pumps. Axial flow pumps, description, velocity triangles, work done on the fluid and energy transfer or head. Miscellaneous pumps like Jet pump, air lift pump and submersible pump. 10 Hrs</p> <p>Self study component: Effects of Cavitation and Prevention of Cavitation.</p>

Course Outcomes		Bloom's Level
CO1	Apply the principles and operations of Turbo-machines with the use of velocity triangles.	III
CO2	Apply basics of fluid machines for analyzing the design parameters of axial flow hydraulic turbines.	III, IV
CO3	Apply basics of fluid machines for analyzing the design parameters of radial flow hydraulic turbines.	III, IV
CO4	Apply basics of fluid machines for analyzing the design parameters of steam turbines.	III, IV
CO5	Analyse the performance parameters of pumps with the use of velocity triangles.	IV

Course Title: CAD/CAM			
Course Code: P18ME551	Sem: 05	L-T-P: 4:0:0	Credit: 03
Contact Period: Lecture: 52 Hrs	Exam: 3 Hrs	Weightage % : CIE- 50, SEE-50	
Course objective: The course aims at enabling the students to understand the hardware and basics of CAD, also programming of CNC machines.			
Course Content			
Unit-1			
Introduction: Role of computers in design and manufacturing, Product cycle in conventional and computerized manufacturing environment, introduction to CAD and CAM, advantages and limitations of CAD/CAM. Latest display systems, Types of input devices, output devices. 10 Hrs Self Study Component: Storage devices used in CAD			
Unit-2			
Computer Graphics and Geometric Modeling Techniques: Software configuration of a graphics system, functions of graphics software, 2-D transformation, homogeneous transformation, concatenation, problems on transformations, Geometric modeling: wire frame model, surface model, Types of curves: Cubic splines, Bezier curves, B-splines and NURBS. Types of Surfaces: Analytic surfaces and Synthetic surfaces. Solid modeling: Types of Solid Modeling Techniques: Constructive Solid Geometry (CSG), Sweeping, Boundary Representation (B-Rep), Feature-Based Modeling, Primitive Instancing, Cell Decomposition. 10 Hrs Self Study Component: Standardization of Graphics.			
Unit-3			
Numerical Control and CNC Machine Tools: Basic components of NC Systems, NC procedure, co-ordinate system, open loop & closed loop system, NC motion control system, Advantage & limitations of NC, application of NC. Classification of CNC machines, Features of CNC machining centers and CNC turning centers. Machine control unit of CNC. 10 Hrs Self Study Component: High Speed Machining			
Unit-4			
CNC Hardware Basics and Tooling: Structure of CNC machine tools, spindles, drives, actuation systems, feedback devices, Axes-standards. Cutting tool materials, Turning tool representation, Milling tooling system, Tool presetting, ATC. Cutting process parameter selection. 10 Hrs Self Study Component: Work/Job Holding Devices			
Unit-5			
CNC Programming: Part program fundamentals, ISO Codes for different functions, Tool length compensation, Cutter radius compensation, Canned cycles. Simple programming exercises in ISO codes for drilling using canned cycles, milling and turning centre programming. 12 Hrs Self Study Component: Axes system for Milling and Turning centres

Course Title: ENGINEERING ECONOMICS			
Course Code: P18ME552	Sem: 05	L-T-P : 4:0:0	Credit: 03
Contact Period: Lecture: 52 Hrs	Exam: 3 Hrs	Weightage % : CIE- 50, SEE-50	
Course objective: The course aims at enabling students to analyze cost/revenue data and carry out economic analysis in the decision making process to justify or reject alternatives/projects on economic basis.			
Course Content			
Unit-1			
Introduction: Definition and Meaning of Economic Terms, Goods, Classification of Goods, Wants, Characteristics and Classification of Wants, Wealth, Classification of Wealth, Demand, Equilibrium Demand Theory, Law of Demand, Price Elasticity of Demand, Supply, Law of Supply, Utility, Total and Marginal Utility, Types of Wages, Taxation, Principle of Taxation, Characteristics of a good Taxation System, Kind of Taxes and their Merits and Demerits. 10 Hrs			
Self study component: Direct and Indirect Taxes			
Unit-2			
Interest: Simple and Compound interest. Interest Formulae and Numericals. COMPARISON OF ALTERNATIVES: Present worth method, Equivalent Annual cost method and Rate of Return method, Numerical Problems. 10 Hrs			
Self study component: Conditions for present worth comparison, future worth comparison.			
Unit-3			
Depreciation: Causes of Depreciation, Methods of Calculating Depreciation, Straight Line Method, Sinking Funds Method, Sum of the Year Digits Methods, Declining Balance, Numerical Problems. REPLACEMENT ANALYSIS: Basic reasons of Replacement, Present Asset and its Replacement, Consideration Leading to Replacement, Installation and Removal Cost, Numerical Problems. 12 Hrs			
Self study component: Importance of accounting for Engineer			
Unit-4			
Estimation Of Material Cost: Definition of Estimating, Importance of Estimating, Aims of Estimating, Qualities of an Estimator, Functions of an Estimator, Errors in Estimating, Mensuration Procedure for Estimation, Estimating the Weight of Raw Materials & Material Cost, Numerical Problems. 10 Hrs			
Self study component: Constituents of Estimation and costing procedure.			
Unit-5			
Costs and Cost Accounting: First Cost, Fixed Cost, Variable Cost, Incremental Cost, Sunk Cost and Marginal Cost, Break Even Analysis & Minimum Cost Analysis, Material Cost, Labour cost, Allocation of Overheads by Different Methods, Man Hour Rate, Machine Hour Rate, Numerical Problems. 10 Hrs			
Self study component: Advantage of efficient costing.

Course Title: MECHATRONICS AND MICROPROCESSOR			
Course Code: P18ME553	Sem: 05	L-T-P: 4:0:0	Credit: 03
Contact Period: Lecture: 52 Hrs	Exam: 3 Hrs	Weightage % : CIE- 50, SEE-50	
<p>Course objective: The course aims at enabling the students to understand the basic concepts of Mechatronics, Mechatronics products and their applications, Different Electrical and Mechanical actuation systems, Signal condition process, Basic concepts of Microprocessor and data representation using different number systems.</p>			
Course Content			
Unit-1			
<p>Introduction: Introduction to Mechatronics systems, measurement systems, control systems, Open & Closed loop control systems, basic elements of closed loop control system, Microprocessor based controllers such as automatic camera and engine management system, classification of sensors, light sensors, Tactile sensors, inputting data by switches, their merits and demerits, Hall – effect sensors, eddy-current Proximity sensors, selection of sensors. 10 Hrs</p> <p>Self study component: Velocity & motion sensor , Displacement & position seniors</p>			
Unit-2			
<p>Electrical Actuation Systems: Electrical systems, Mechanical switches, relays, solid state switches, diodes, thyristors and triacs, bipolar transistors, MOSFETS, solenoids, DC motors, permanent magnet DC motors with field coils, brushless permanent magnet DC motors, AC motors, stepper motors and their merits and demerits. 10 Hrs</p> <p>Self study component: Bipolar transistor MOSFETS</p>			
Unit-3			
<p>Signal Conditioning: Introduction to signal conditioning, signal conditioning process, operational amplifiers, inverting and non- inverting operational amplifiers, protection, filtering, wheat stone bridge, Digital signals, ADC, DAC, Multiplexers, Data Acquisition system, pulsed modulation. 10 Hrs</p> <p>Self study component: Digital signal processing, summing & Differential Amplifiers</p>			
Unit-4			
<p>Introduction to Microprocessor: Evolution of Microprocessor, Organization of Microcontroller, instructions, machine and mnemonics codes, machine and assembly language programming, High level language programming, organization of INTEL 8085 microprocessor, Data and Address busses, registers in the 8085, instruction set of 8085, instruction types, CPU of Microprocessors, the fetch operation, execute cycle, memory read / write cycle, timing diagram, HALT and HOLD states. 10 Hrs</p> <p>Self study component: Selecting a micro controller: Applications of Micro controlling</p>			
Unit-5			
<p>Microprocessor Data Representation: Positional number system, binary number system, octal number system, decimal number system, Hexadecimal number system, conversion from one number system to another, negative number representation, representation of floating point numbers, accuracy and range in floating point numbers, Binary Arithmetic: addition and subtraction of binary integers, overflow and underflow, logic gates, AND, OR, NOT, NAND, NOR and EXCLUSIVE – OR gate. 12 Hrs</p> <p>Self study component: Laws of Boolean Algebra & Numerical</p>

Course Title: INDUSTRIAL AUTOMATION			
Course Code: P18ME554	Semester: 05	L-T-P: 4-0-0	Credits: 03
Contact Period - Lecture: 52 Hrs.	Exam: 3Hrs.	Weightage: CIE: 50 %;SEE: 50%	
Course Objectives: The course aims at enabling the students to understand the Industrial automation and Quality control systems.			
Course Content			
Unit-1			
Introduction: Production System – Facilities and Manufacturing Support systems, Automation in Production systems, Automation principles & Strategies.			
Automation: Basic Elements of an Automated System, Advanced Automation Functions & Levels of Automation, Continuous versus Discrete control, Computer Process control. 10 Hrs			
Self Study Component: Forms of Computer Process Control.			
Unit-2			
Hardware Components For Automation And Process Control: Sensors, Actuators, Analog-to-Digital Converters, Digital-to-Analog Converters, Input/Output Devices for Discrete Data			
Automated Manufacturing Systems: Components of Manufacturing systems, Classification of Manufacturing Systems, overview of Classification Scheme, Single Station Manned cells and Single Station Automated Cells. 12 Hrs			
Self Study Component: Applications of Single station cells.			
Unit-3			
Cellular Manufacturing: Part Families, Parts Classification and coding, Production Flow Analysis, Cellular Manufacturing, Application of group technology,			
Flexible Manufacturing Systems: Introduction to FMS, FMS Components, FMS Applications & Benefits, and FMS Planning & Implementation Issues. 10 Hrs			
Self Study Component: Quantitative analysis of FMS.			
Unit-4			
Inspection Technologies: Automated Inspection, Coordinate Measuring Machines(CMM) Construction, operation & Programming, Software, Application & Benefits, Flexible Inspection System, Inspection Probes on Machine Tools, Machine Vision, optical Inspection Techniques, Non-contact Non optical Inspection Technologies. 10 Hrs			
Self Study Component: Surface measurements.			
Unit-5			
Manufacturing Support System: Process Planning, Computer Aided Process Planning, Concurrent Engineering & Design for Manufacturing, Advanced Manufacturing Planning, lean production and waste in manufacturing, Just-in Time Production System, Autonomation, Worker involvement, Basic concepts of lean and Agile manufacturing. 10 Hrs			
Self Study Component: Applications of Lean & Agile Manufacturing

Course Title: PROBLEM SOLVING SKILL FOR COMPETITIVE EXAMINATIONS			
Course Code: P18ME591	Semester:05	L-T-P: 0-2-0	Credit: 1
Contact Period - Tutorial: 26Hrs.	Exam: 1Hr.	Weightage: CIE: 50 %; SEE: 50%	
Course Objectives: This course enhances student's problem-solving skills in mechanical engineering courses and trains them for competitive exams.			
Course Content			
Applied Mechanics and Design			
Engineering Mechanics: Free-body diagrams and equilibrium; trusses and frames; virtual work; kinematics and dynamics of particles and of rigid bodies in plane motion; impulse and momentum (linear and angular) and energy formulations, collisions.			
Mechanics of Materials: Stress and strain, elastic constants, Poisson's ratio; Mohr's circle for plane stress and plane strain; thin cylinders; shear force and bending moment diagrams; bending and shear stresses; deflection of beams; torsion of circular shafts; Euler's theory of columns; energy methods; thermal stresses; strain gauges and rosettes; testing of materials with universal testing machine; testing of hardness and impact strength.			
Theory of Machines: Displacement, velocity and acceleration analysis of plane mechanisms; dynamic analysis of linkages; cams; gears and gear trains; flywheels and governors; balancing of reciprocating and rotating masses; gyroscope 8 Hrs			
Fluid Mechanics and Thermal Sciences			
Fluid Mechanics: Fluid properties; fluid statics, manometry, buoyancy, forces on submerged bodies, stability of floating bodies; control-volume analysis of mass, momentum and energy; fluid acceleration; differential equations of continuity and momentum; Bernoulli's equation; dimensional analysis; viscous flow of incompressible fluids, boundary layer, elementary turbulent flow, flow through pipes, head losses in pipes, bends and fittings.			
Thermodynamics: Thermodynamic systems and processes; properties of pure substances, behaviour of ideal and real gases; zeroth and first laws of thermodynamics, calculation of work and heat in various processes; second law of thermodynamics; thermodynamic property charts and tables, availability and irreversibility; thermodynamic relations. 8 Hrs			
Materials, Manufacturing and Industrial Engineering			
Engineering Materials: Structure and properties of engineering materials, phase diagrams, heat treatment, stress-strain diagrams for engineering materials.			
Casting, Forming and Joining Processes: Different types of castings, design of patterns, moulds and cores; solidification and cooling; riser and gating design. Plastic deformation and yield criteria; fundamentals of hot and cold working processes; load estimation for bulk (forging, rolling, extrusion, drawing) and sheet (shearing, deep drawing, bending) metal forming processes; principles of powder metallurgy. Principles of welding, brazing, soldering and adhesive bonding.			
Machining and Machine Tool Operations: Mechanics of machining; basic machine tools; single and multi-point cutting tools, tool geometry and materials, tool life and wear; economics of machining; principles of non-traditional machining processes; principles of work holding, design of jigs and fixtures.			
Metrology and Inspection: Limits, fits and tolerances; linear and angular measurements; comparators; gauge design; interferometry; form and finish measurement; alignment and testing methods; tolerance analysis in manufacturing and assembly. 10 Hrs

Department of Mechanical Engineering

Evaluation Scheme																		
Section	Question No.	No. of Questions	Marks Per Question							Total Marks								
General Aptitude	1 to 10	10	1							10								
Technical	11 to 40	30	1							30								
Engineering	41 to 70	30	2							60								
Total Question: 70		Total Marks: 100		Total Duration: 3hrs														
Technical Section:70 Marks			General Aptitude:15 Marks			Engineering Mathematics:15 Marks												
25 to 40 marks will allotted to Numerical Answer Type Questions.																		
Type of question					Negative marking for wrong answer													
MCQs					1/3 for 1 mark questions 2/3 for 2 marks questions													
Numerical Answer Type (NAT) Questions					No negative marking													
At the end of the course, students will be able to,																		
Course Outcomes												Bloom's Level						
CO1	Apply the technical skill to attend all kind of competitive examinations.												III					
CO2	Analyse the problems related to all streams of mechanical engineering.												IV					
CO3	Motivate to take up all kinds of competitive examinations.												IV					
Course Articulation Matrix																		
Course Outcomes					Program Outcomes												PSO	
					1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1	Apply the technical skill to attend all kind of competitive examinations.				3													
CO2	Analyse the problems related to all streams of mechanical engineering.					3												
CO3	Motivate to take up all kinds of competitive examinations.					3												

Course Title : APTITUDE AND REASONING DEVELOPMENT - ADVANCED (ARDA)			
Course Code : P18HU510	Semester : 05	L- T- P : 0 - 0 - 2	
Contact Period: Lecture: 32 Hr, Exam: 3 Hr		Weightage: CIE:50;% SEE:50%	
Prerequisites: Vocabulary builder, Concept of Percentage.			
Course Content			
Unit-1			
<p>Reading Comprehension: Introduction: Read more and more, The process of writing and its relevance to the process of writing, how reading skills are important for aspects other than the reading comprehension questions, the daily reading scheme.</p> <p>Seven dimension approach to better reading skills: Developing the ability of understanding vocabulary in context, Ability to identify and understand main ideas, Ability to predict and identify supporting details, Understanding the use of transition and idea organization patterns, Inferences, Identifying purpose and tone, Recognizing and evaluating arguments and their common structures.</p> <p>Theory of reading comprehension : Solving RC passages is an exact science, tackling RC on the basis of evaluation of support, All passages have a topic, purpose and a plan, Other things to pick up while reading the passage– The tonality and other software related the author’s viewpoint in the passage, specific details and their use in the passage, Types of questions asked in reading comprehension passage. 8 Hrs</p>			
Unit-2			
<p>Averages and Alligations mixtures:</p> <p>Average: relevance of average, meaning of average, properties of average, deviation method, concept of weighted average. Alligation method: situation where allegation technique, general representation of alligations, the straight line approach, application of weighted average and alligation method in problems involving mixtures. Application of alligation on situation other than mixtures problems. 6 Hrs</p>			
Unit-3			
<p>Permutation and Combination: Understanding the difference between the permutation and combination, Rules of Counting-rule of addition, rule of multiplication, factorial function, Concept of step arrangement, Permutation of things when some of them are identical, Concept of 2^n, Arrangement in a circle.</p> <p>Probability: Single event probability, multi event probability, independent events and dependent events, mutually exclusive events, non-mutually exclusive events, combination method for finding the outcomes. 6 Hrs</p>			
Unit-4			
<p>Progression:</p> <p>Arithmetic Progression: sum of given number of terms in an A.P., arithmetic mean, to insert a given number of arithmetic means between two given quantities, nth term of an A.P., finding common difference of an A.P. given 2 terms of an A.P., types of A.P.s– increasing A.P.s and decreasing A.P. s</p> <p>Geometric: to find, the geometric mean between two given quantities, to insert a given number of geometric means between two given quantities, sum of a number of terms in a G.P. Types of G.P.s— increasing G. P. s type one and two , decreasing G. P. s type one and two.</p> <p>Harmonic Progression: to find the harmonic mean between two given quantities , theorems related with progressions, solved examples sample company questions 4 Hrs</p>			
Unit-5			
<p>Coding Decoding: Letter Coding, Number Coding, symbol coding</p> <p>Crypt arithmetic: Basic concepts , addition , subtraction, multiplication of coded alphabets, Types of cryptarithm</p> <p>Data Interpretation: Approach to interpretation - simple arithmetic, rules for comparing fractions, Calculating (approximation) fractions, short cut ways to find the percentages, Classification of data– Tables, Bar graph, line graph, Cumulative bar graph, Pie graph,</p>			

Department of Mechanical Engineering

Combination of graphs. Combination of table and graphs												8 Hrs

Department of Mechanical Engineering

Course Title: DESIGN OF MACHINE ELEMENTS-II			
Course Code: P18ME61	Sem: 06	L-T-P: 4:0:0	Credit: 04
Contact Period: Lecture: 52 Hrs	Exam: 3 Hrs	Weightage % : CIE- 50, SEE-50	
Course objective: The course aims at strengthening the design capabilities of the students by exposing them to the design of different mechanical elements that are commonly used in engineering applications.			
Course Content			
Unit-1			
Curved Beams: Introduction, stresses in curved beams, design of curved beams.			
Springs: Introduction, types of springs, terminology, stresses and deflection in helical coil springs of circular and non-circular cross sections, springs under fluctuating loads, concentric springs. Leaf Springs, stresses in leaf springs, equalized stresses, length of spring leaves. Safety issues in leaf spring design. 10 Hrs			
Self study component: Surge in springs, buckling in compression spring.			
Unit-2			
Cylinders & cylinder heads: Introduction, thick cylindrical shells subjected to internal and external pressure, Lamé's Equations, Clavarino's equations, Birnie's equations, compound cylinders, stresses due to different types of fits, autofrettage, circular and rectangular cover plates. Safety aspects in pressure vessel design. 10 Hrs			
Self study component: Study of Barlow's equation, Dish head cylinder with uniformly distributed load.			
Unit-3			
Spur, helical and bevel gears: Introduction, spur gears- terminology, standard proportions of gear systems, stresses in gear tooth, Lewis equation and form factor, design for strength, dynamic load and wear load. Helical Gears- definitions, formative number of teeth, design based on strength, dynamic and wear loads. Bevel Gears- terminology, formative number of teeth, design based on strength, dynamic and wear loads. 12 Hrs			
Self study component: Causes of Gear tooth failure, Effect of material defects on gear functioning.			
Unit-4			
Worm Gears- Terminology, design based on strength, dynamic, wear loads and efficiency of worm gear drives.			
Clutches & brakes: Introduction, types of clutches, design of Clutches (single plate, multi plate and cone clutches). Brakes- Types, energy absorbed, heat dissipated. Design of single block brakes and simple band brakes. Safety issues in brakes. 10 Hrs			
Self study component: Thermal rating of worm Gearing, Working of Centrifugal clutch.			
Unit-5			
Lubrication and Bearings: Introduction, principle of hydrodynamic lubrication, assumptions in hydrodynamic lubrication, bearing characteristic number and modulus, Sommerfeld number, coefficient of friction, power loss, heat generated and heat dissipated, Design of journal bearings. Rolling contact bearings- types of bearings, static equivalent load, selection of ball and roller bearings. 10 Hrs			
Self study component: Properties of sliding contact bearing materials			
Design data hand book:

Course Title: FINITE ELEMENT METHODS			
Course Code: P18ME62	Sem: 06	L-T-P: 4:0:0	Credit: 04
Contact Period: Lecture: 52 Hrs	Exam: 3 Hrs	Weightage % : CIE- 50, SEE-50	
Course objective: The course aims to provide an introductory approach to finite element method as a basic numerical tool for solving mechanical engineering problems.			
Course Content			
Unit-1			
<p>Introduction to FEM: Need for use of FEM, Advantages and disadvantages of FEM, Engineering Applications of FEM, Steps involved in FEM, Discretization process - types of elements (1D,2D,3D), size of the elements, location of nodes, node numbering scheme, Method of solution of linear algebraic equations - Gauss elimination method. Numerical integration by Gaussian quadrature (one point and two point formula). Basic elastic equations – body force and traction force, strain-displacement relations. Principle of minimum potential energy and derivation of potential energy functional for a 3D elastic body, concept of plane stress and plane strain and their stress-strain relations. 10 Hrs</p> <p>Self study component: Methods for FEM formulation</p>			
Unit-2			
<p>Interpolation Models: Displacement function, selection of the order of displacement function, convergence criteria, geometric isotropy, Pascal’s triangle for 2D polynomial, Different co-ordinate systems used in FEM, Interpolation or shape functions for 1D linear and quadratic bar elements and 2D linear triangular (CST) element in cartesian and natural co-ordinate systems. Lagrangian polynomial – Shape functions for linear quadrilateral element (QUAD 4) and quadratic quadrilateral element (9-noded), Iso-parametric, sub-parametric and super-parametric elements, Concept of Jacobian matrix, Jacobian matrix for CST. 10 Hrs</p> <p>Self study component: Simplex, complex and multiplex Elements. Pascal’s pyramid for 3D Polynomial</p>			
Unit-3			
<p>Element Stiffness Matrix and Load Vectors: Strain displacement matrix, Stiffness matrix and load vector for linear and quadratic bar element and CST element. Assembly of elements by direct stiffness method, Treatment of boundary conditions- elimination and penalty methods. Analysis of axially loaded uniformly tapered and stepped bars. 12 Hrs</p> <p>Self study component: special characteristics of stiffness matrix. Stress vector for CST Element under plane stress and plane strain condition.</p>			
Unit-4			
<p>Analysis Of Plane Trusses and Beams: stiffness matrix for plane truss element, analysis of truss members. Hermite shape function for beam element in Cartesian coordinates, Stiffness matrix and load vector for beam element, element shear force and bending moment, analysis of beams. 10 Hrs</p> <p>Self study component: comparison of beams and trusses, Differences between Hermite shape function and Lagrange interpolation function.</p>			
Unit-5			
<p>Analysis of Heat Transfer Problems: Steady state heat transfer, 1D heat conduction- governing equation, boundary conditions, one-dimensional element, Galerkin’s approach to heat conduction, heat flux boundary condition. 1D heat transfer in thin fins- Formulation of equations. Simple numerical of 1D heat transfer problems on composite walls and fins with conduction and convection. 10 Hrs</p> <p>Self study component: Different types of boundary conditions in heat transfer problem.</p>

At the end of the course, students will be able to,

Course Outcomes		Bloom's Level
CO1	Apply the basic concepts and mathematical preliminaries of FEM required to solve basic field problems.	III, IV
CO2	Develop interpolation models for 1D and 2D elements that satisfy convergence criteria and geometric isotropy and use isoparametric concept in the finite element analysis.	IV
CO3	Formulate element stiffness matrices and load vectors for different elements using variational principle and analyze axially loaded bars.	IV
CO4	Make use of finite element formulations in analysing the stresses, strains and reactions of trusses and transversely loaded beams.	III, IV
CO5	Formulate finite element equations for heat transfer problems using Variational and Galerkin techniques to analyze conduction and convection heat transfer problems.	III, IV

Course Title: HEAT AND MASS TRANSFER			
Course Code: P18ME63	Sem: 06	L-T-P: 4:0:0	Credit: 04
Contact Period: Lecture: 52 Hrs	Exam: 3 Hrs	Weightage % : CIE- 50, SEE-50	
<p>Course objective: The course aims to cover the basic principles of heat transfer, to present a wealth of real-world engineering examples to give students a feel for how heat transfer is applied in engineering practice and to develop an intuitive understanding of the subject matter by emphasizing the physics and physical arguments.</p>			
Course Content			
Unit-1			
<p>General introduction: Modes and basic laws of heat transfer- general heat conduction equation in Cartesian coordinates, heat conduction equation in cylinder and spherical coordinates (no derivation). Boundary conditions of conduction problems. Numerical Problems.</p> <p>One Dimensional steady state heat conduction: slab, hollow cylinder, hollow sphere and their composites. Critical thickness of insulations, Numerical Problems. Theory of fins governing partial differential equation – One Dimensional fin of uniform cross-section – Numerical problems. 12 Hrs</p> <p>Self study component: Combined Heat Transfer Mechanism, Thermal Resistances also in Series and Parallel, Applications of Fins</p>			
Unit-2			
<p>Steady State Conduction with Heat Generation: Introduction, One Dimensional heat conduction with heat sources in slab, temperature effect on thermal conductivity. Transient Heat Conduction: Systems with negligible internal resistance, Transient heat conduction in plane walls, cylinders, spheres with convective boundary conditions, Chart solution, Numerical problems. 10 Hrs</p> <p>Self study component: Numerical methods for ID & Two Dimensional steady state Heat Generation</p>			
Unit-3			
<p>Convection: Concept of boundary layers (hydro dynamic and thermal) - critical Reynolds number. Drag-co-efficient and heat transfer coefficient, Reynold's – Colburn analogy. Application of dimensional analysis for free & forced convection problems, significance of Reynolds, Prandtl and Nusselt and Grashoff numbers. Free convection: free convection from or to vertical, horizontal and inclined flat plates, vertical and horizontal cylinder. Numerical Problems. Forced convection: Flow over a flat plate, over a cylinder and across a tube bundle, flow through tubes and ducts. Numerical Problems. 10 Hrs</p> <p>Self study component: Forced Convection flow over spheres, Forced Convection cooling of electronic devices.</p>			
Unit-4			
<p>Radiation: Introduction- absorption, reflection and transmission of radiation, black and grey body concept , Kirchoff's Law, Planck's law, Wein's displacement law, Lamberts cosine law, radiation intensity- total emissive power, radiation between two parallel black surfaces, gray surfaces, radiation shield, Hottel's cross string formula. Numerical Problems. 10 Hrs</p> <p>Self study component: Fundamental principles of white, Opaque and transparent body concept, Radiation Shield.</p>			
Unit-5			
<p>Heat exchangers: Classification of heat exchangers overall heat transfer coefficient, fouling and fouling factor; LMTD, effectiveness- NTU methods of analysis of heat exchangers. Numerical Problems. Heat transfer with phase change (boiling and condensation). Types of condensation, Nusselt's theory for laminar condensation on a vertical flat surface, regimes of pool boiling, Numerical Problems. Mass transfer: Mass transfer concept and Fick's law of diffusion (no numericals) 10 Hrs</p> <p>Self study component: Shell & tube, compact& multipass heat exchangers Mechanism of Nucleate Boiling</p>

Course Title: TOTAL QUALITY MANAGEMENT			
Course Code: P18ME641	Semester: 06	L-T-P-3-2-0	Credits: 03
Contact Period - Lecture: 52 Hrs.;	Exam:3Hrs.	Weightage%: CIE: 50,SEE: 50	
Course Objectives: The course aims at enabling the students to understand the basic concepts of TQM. Identify and develop appropriate tools solving of real life problems.			
Course Content			
Unit-1			
Introduction: Introduction, Definition, Basic approach, Gurus of TQM, Awareness, Defining Quality, Historical Review, Obstacles, Benefits of TQM, TQM Exemplary Organization, Exercises.			
Leadership: Definitions, Characteristics of Quality Leaders, Leadership Concepts, The 7 Habits of Highly Effective People, Ethics, The Deming Philosophy, Role of TQM Leaders, Implementation, Quality Council, Core Values, Concepts and Framework, Quality Statements, Strategic Planning, Communications, Decision Making, TQM Exemplary Organization, Exercises. 12 Hrs			
Self Study Component: Characteristics of successful teams.			
Unit-2			
Customer Satisfaction: Introduction, Who is the Customer?, Customer Perception of Quality, Feedback, Using Customer Complaints, Service Quality, Translating Needs into Requirements, Customer Retention, Additional Comments, TQM Exemplary Organization, Exercises.			
Continuous Process Improvement: Introduction, Process, The Juran Trilogy, Improvement Strategies, Types of Problems, The PDSA Cycle, Problem-Solving Method, Kaizen, Reengineering, Six-Sigma, TQM Exemplary Organization, Exercises. 10 Hrs			
Self Study Component: Objectives of Performance measures.			
Unit-3			
Benchmarking: Introduction, Benchmarking Defined, Reasons to Benchmark, Process, Deciding What to Benchmark, Understanding Current Performance, Planning, Studying Others, Learning from the Data, Using The Findings, Pitfalls and Criticisms of Benchmarking, TQM Exemplary Organization, Exercises.			
Quality Management Systems: Introduction, Benefits of ISO Registration, ISO9000 Series of standards, Sector-Specific Standards, ISO 9001 Requirements, Implementation, Documentation, Writing the Documents Internal Audits, Registration, Closing Comments, TQM Exemplary Organization, Exercises. 10 Hrs			
Self Study Component: Limitations of Quality of Cost.			
Unit-4			
Environmental Management System: Introduction, ISO14000 Series Standards, Concepts of ISO 14001, Requirements of ISO 14001, Benefits of EMS, Integrating ISO 14000with ISO9000, Relationship to Health and safety Additional Comments, TQM Exemplary Organization, Exercises.			
Statistical Process Control: Introduction, Pareto Diagram, Process Flow Diagram, Cause-and-Effect Diagram, Check Sheets, Histogram, Statistical Fundamentals, Introduction to Control Charts, State of Control, Out of Control Process, Process Capability, Different Control Charts for variables, Control Charts for Attributes, scatter Diagram, Summary, TQM Exemplary Organization Exercises. 10 Hrs			
Self Study Component: Applications and Importance of MSA.			
Unit-5			
Quality Function Deployment: Introduction, The QFD Team, Benefits of QFD, The Voice of the Customer, Organization of Information, House of quality, QFD Process, Examples, Conclusion, TQM Exemplary Organization, exercises.			
Quality by Design: Introduction, Rationale for Implementation Benefits, Teams, Communication Models, Implementation, Tools, Misconceptions and Pitfalls, TQM			

Department of Mechanical Engineering

Exemplary Organization Exercises.												10 Hrs

Course Title: NON TRADITIONAL MACHINING			
Course Code: P18ME642	Sem: 06	L-T-P: 4:0:0	Credit: 03
Contact Period: Lecture: 52 Hrs	Exam: 3 Hrs	Weightage % : CIE- 50, SEE-50	
Course objective: The course enables to understand the need for nontraditional machining processes. It also highlights various Non-conventional machining processes.			
Course Content			
Unit-1			
Introduction to Mechanical Process: Need for nontraditional machining processes, Process selection- classification on-comparative study of different processes, comparison between conventional and Non-conventional machining process selection. Ultrasonic Machining- Definition-Mechanism of metal removal- elements of the process-Tool feed mechanism, theories of mechanics of cutting, effect of parameter, applications. 10 Hrs			
Self study component: Advantages and disadvantages of Ultrasonic Machining			
Unit-2			
Abrasive Jet Machining and Thermal Metal Removal Processes: Principles - parameters of the process applications-advantages and disadvantages. Electric discharge machining-Principle of operation - mechanism of metal removal basic EDM circuitry-spark erosion generators- Analysis of relaxation type of circuit-material removal rate in relaxation circuits -critical resistance parameters in Ro Circuit-Dielectric fluids-Electrodes for spark erosion- surface finish, applications, pollution and safety issues. 10 Hrs			
Self study component: Principle of water jet machining and Applications of water jet machining.			
Unit-3			
Chemical and Electrochemical Machining: Introduction, fundamental principle, types of chemical machining Maskants, Etchants, Advantages and disadvantages, applications, environmental issues, Electro Chemical machining (ECM), Classification of ECM, process, Principle of ECM, Chemistry of the ECM process, parameters of the process, determination of the metal removal rate, dynamics of ECM process-Hydrodynamics of ECM process-polarization-Tool Design-advantages and disadvantages-applications. Electro Chemical grinding-Electro Chemical honing. Electrochemical deburring. 11 Hrs			
Self study component: Process Characteristics of chemical machining.			
Unit-4			
Laser Beam Machining and Ion Beam Machining Introduction-principles of generation of lasers, Equipment and Machining Procedure-Types of Lasers-Process characteristics-advantages and limitations- applications. Introduction-Mechanism of metal removal and associated equipment-process characteristics applications, safety issues.			
High Velocity forming processes: Introduction-development of specific process-selection-comparison of conventional and high velocity forming methods-Types of high velocity forming methods-explosion forming process-electro hydraulics forming-magnetic pulse forming. 11 Hrs			
Self study component: Advantages, disadvantages and applications of High Velocity forming processes.			
Unit-5			
Plasma arc machining and Electron beam machining: Introduction-Plasma-Generation of Plasma and equipment - Mechanism of metals removal, PAM parameters-process characteristics- type of torches, applications. EBM: Thermal & Non thermal type-Process characteristics -applications, safety issues. 10 Hrs			
Self study component: Safety Precautions of Plasma arc machining.

Department of Mechanical Engineering

Course Title: I C ENGINES			
Course Code: P18ME643	Sem: 06	L-T-P-H : 4:0:0	Credit: 03
Contact Period: Lecture: 52 Hrs	Exam: 3 Hrs	Weightage % : CIE- 50, SEE-50	
Course objective: This course is helps the student to understand about IC engines and its combustion processes and recent technologies developed in IC engines.			
Course Content			
Unit-1			
<p>Thermodynamic Cycle Analysis: Fuel- Air cycle; Variation of specific heat; loss due to variation of specific heat; Dissociation. Effect of variables- compression ratio; effect of fuel –air ratio on efficiency; maximum temperature; maximum pressure; exhaust temperature; MEP Numerical problems.</p> <p>Fuels: Hydro carbons; structure of petroleum – paraffin, olefin, naphthene; aromatic series; requirements of an ideal gasoline; effect of volatility engine performance; knock rating on SI engine fuels- octane number; research & motor octane number; performance number. 12 Hrs</p> <p>Self study component: knock rating of diesel fuels - cetane number; diesel index; aniline point API gravity and specific gravity</p>			
Unit-2			
<p>Carburation and Combustion Process in S.I. Engines: Carburettor; types of carburettors and its limitations. Knock free and knocking combustion- stages of combustion process in S.I. engines. Features of different types of combustion chambers system for S.I. engine. I-head, F-head combustion chambers. Effect of engine variables on ignition lag; effect of variables on flame propagation. Detonation; effect of detonation; control of detonation. 10 Hrs</p> <p>Self study component: HUCR values. Anti Knock agents – Pre ignition – Post ignition.</p>			
Unit-3			
<p>C. I. Engines: Ricardo’s three stages of combustion process in C.I. engines. Delay period & factors affecting delay period. Variables affecting delay period; Diesel knock- Methods of controlling diesel knock.</p> <p>Combustion Chambers: C.I. engine combustion chambers; methods of generating air swirl; induction air swirl and open combustion chambers; turbulent swirl chambers; M. type combustion chamber. 10Hrs</p> <p>Self study component: Requirements of combustion chamber, features of different types of combustion chambers system for SI Engine</p>			
Unit-4			
<p>Fuel Injection Systems: Diesel injection systems; types of injection systems; fuel pump; Nozzles of different types; Petrol injection systems for S.I. engines; Electronic fuel injection system. MPFI system; spark advance mechanisms; Various factors affecting piston temperature in an engine. Cooling system-Water cooling, Air cooling; Radiators. 10 Hrs</p> <p>Self study component: Alternative fuels – alcohols; vegetable oils; bio gas as Diesel engine fuels.</p>			
Unit-5			
<p>Modern Developments: Turbo charging and super charging of I.C. engines, Stratified charge engines (Lean burned SI engine); Multi fuel engines. Two injector engines; Pilot ignition engine, all ceramic swirl chamber engines.</p> <p>Emission Regulation and Control Systems: Mechanism of pollutant formation. Total emission control package thermal reactor package-catalytic converter package - control of NO_x -Exhaust gas recirculation; chemical method. 10 Hrs</p> <p>Self study component: Emission standards</p>

Course Title: MAINTENANCE ENGINEERING			
Course Code: P18ME644	Sem: 06	L-T-P: 4:0:0	Credit: 03
Contact Period: Lecture: 52 Hrs	Exam: 3 Hrs	Weightage % : CIE- 50, SEE-50	
<p>Course objective: The course aims at strengthening the Maintenance and management capabilities of the students by exposing them to handling the different maintenance requirements and management that are commonly used in Machinery.</p>			
Course Content			
Unit-1			
<p>Introduction to Maintenance System: Definition, Scope, Objective, Functions and Importance of maintenance system.</p> <p>Types of Maintenance System: Break down maintenance system, Preventive maintenance, Predictive maintenance design out maintenance, corrective maintenance, Planned maintenance, total productive maintenance, condition monitoring. Problems on selection of methods like preventive or breakdown maintenance. 12 Hrs</p> <p>Self study component: Fundamental Requirements of Effective Preventive Maintenance</p>			
Unit-2			
<p>Economics in Maintenance: Repair, replacement, Repair complexity, Finding out most optimal preventive maintenance frequency. Numerical treatment required.</p> <p>Machinery Maintenance: Causes of machine failure, performance evaluation, complete overhauling of Machines tools. 10 Hrs</p> <p>Self study component: Maintenance Equipment and Facilities</p>			
Unit-3			
<p>Maintenance Planning: Maintenance planning and scheduling. Repair order control manpower requirement, Maintenance job analysis spare parts control.</p> <p>Maintenance Scheduling: Planning of maintenance junctures man power allocation, Long range planning, short range planning. Planning techniques and procedure. Estimation of maintenance work. Maintenance control. 10 Hrs</p> <p>Self study component: Motivation in Maintenance</p>			
Unit-4			
<p>Computers in Maintenance: Features and benefits of Computer aided maintenance. Application of computer to maintenance work.</p> <p>Pollution Control in Industry: Dust control- Fiber collectors, mechanical dust collectors, wet type collectors, Electro static precipitators, Noise pollution Control –Noise measurement and control. Industrial vibration and its control. 10 Hrs</p> <p>Self study component: Classification of information system and decision support system.</p>			
Unit-5			
<p>Industrial Safety: Economic importance of accidents, types of safety organizations, analysis of accident records, accident investigations. Analysis of accident Safety standards for Mechanical equipment and Electrical system. Chemical hazards, material handling, exhaust system, welding, plant housekeeping-building, Aisles, Passages, floors, tool cribs, washrooms, canteens. 10 Hrs</p> <p>Self study component: OSHA’S hazard communication standard in Industries</p>

Course Title: FOUNDRY & WELDING TECHNOLOGY (Open Elective-II)			
Course Code: P18MEO651	Semester: VI	L-T-P: 4-0-0	Credits: 03
Contact Period - Lecture: 52 Hrs.	Exam: 3Hrs.	Weightage%: CIE: 50,SEE: 50	
Course Objectives: The course aims at understanding and strengthening knowledge of advancements in Foundry and welding technology to the students by exposing them to different Foundry and welding techniques that are commonly used in industries.			
Course Content			
Unit-1			
<p>Solidification of Castings: Introduction- concept of solidification of metals- solidification of pure metals- nucleation, homogeneous or self-nucleation, heterogeneous nucleation- growth-solidification of alloys, alloyed metal characteristics, main types of alloys, solid solution alloys, their characteristics, and solidification, phase diagram, coring or segregation, types of segregation, solute distribution, - solidification phenomenon and grain structure, mechanism of dendrite, formation and dendrite growth- solidification rate, directional solidification and control of solidification to obtain sound castings.</p> <p>Metallurgy of Cast Steel: Composition, structure, control of properties, macrostructure, microstructure, inclusions, Heat- treatment, annealing, normalizing, stress relief anneal, liquid quench and temper. 10 Hrs</p> <p>Self study component: Alloy steels, measurement of hardenability and its significance, production heat treating.</p>			
Unit-2			
<p>Principles of Gating: Gating System- Requirements, purposes of functions of the gating system- pouring cups and basins- spruers- gates, their characteristics and different types- design of gating system, objectives achieved from good design, defects occurring due to improper design of gating system, turbulence in gating system, metal flow rate and velocity calculations, design criteria for pouring basin, design of sprue, pouring time, design of runner and gates, pressurized and unpressurized gating system, streamlining the gating system, practical rules for gating practice, elimination of slag and dross for copper, ferrous and light metal alloys.</p> <p>Principles of Riser: Introduction- Functions of a riser- types of riser, open and blind risers- Riser and Directional solidification- increasing riser efficiency and promoting directional solidification, insulating materials, exothermic materials, chills, padding etc. –Feeder Head (or riser system) Design, general principles, riser shape, riser size, Chvorinov’s rule, riser location and riser feeding distance. 10 Hrs</p> <p>Self study component: Riser practice for alloys- Heat loss from risers.</p>			
Unit-3			
<p>Casting Design Considerations: functional design, mechanical strength, dimensional design factors, simplification of foundry practice, molding and coring, elimination of coring, metallurgical design,</p> <p>Shakeout/ Cleaning/ Finishing: shakeout- modern developments, punch out machines, shakeout tables and decks, high frequency shakeouts, vibrating shakeout conveyors, rotary separators, robots and manipulators, - fettling(cleaning) and finishing of castings- removal of cores- cleaning of castings surfaces, hand methods and mechanical methods,- blast cleaning- process control- blast cleaning abrasives- air blasting- mechanical blast cleaning (wheelabrator system)- hydro blasting- safety considerations when blast cleaning nonferrous casting, chemical cleaning, removal of gates and riser- removal of fins and other unwanted projections from castings- finishing of castings- grinding castings, robots for grinding, manipulators, trim dies. abrasive 10 Hrs</p> <p>Self study component: products- surface treatment of castings.</p>			
Unit-4			
<p>Welding Processes: Classification of Welding and allied processes, cast weld processes: Thermit welding, Electroslag welding, Arc and Flame welding processes: Seam welding & Arc spot welding processes, Resistance welding processes: Spot welding, Seam welding, Zonal welding processes, Solid state welding processes: High heat input and Low heat input processes,</p>			

Department of Mechanical Engineering

Allied processes: Material joining processes, Thermal cutting processes, Modes of Welding: manual welding, semiautomatic welding, automatic welding, automated welding(flexible welding system), positions in welding.

Cracks in Welding: introduction, classifications in weld cracks, Hot and Cold cracks, Nomenclature, Location & Orientation of weld cracks: Weld metal cracks, Base metal cracks, Factors contribution to weld Cracking. **11 Hrs**

Self study component: Specific weld cracks: Chevron cracks, lamellar cracks, reheat cracking, stress corrosion cracking

Unit-5

Defects in Welding: Classification of weld defects, General sources of weld defects, Arc welding defects: surface or visual defects, subsurface weld defects, Acceptance levels of arc welding defects, Weld defects in other arc welding processes: Resistance welding defects, defects in friction welding, defects in welds of other welding processes.

Weld Inspection and Quality Control: Introduction, visual inspection and measurement: equipment, visual inspection, Destructive tests, Non-Destructive tests(NDT): liquid penetrate testing, magnetic particle testing, eddy current testing, magneto graphic test, radiographic testing, ultrasonic testing, acoustic emission testing, comparison of NDT methods, Pressure and Leak testing: kerosene test, hydrostatic pressure testing, air pressure or pneumatic testing, vacuum testing, halide testing, helium test. **11 Hrs**

Self study component: Comparison of NDT methods, vacuum testing, halide testing, helium test.

Course Title: NON DESTRUCTIVE TESTING (Open Elective-II)			
Course Code: P18MEO652	Sem: 06	L –T-P: 4:0:0	Credit: 03
Contact Period: Lecture: 52 Hrs	Exam: 3Hrs	Weightage %: CIE- 50, SEE-50	
Course objective: This course gives an insight into various non destructive testing techniques used in industry.			
Course Content			
Unit - 1			
Introduction to NDT: Introduction, Types of flaw, Methods for the detection of Surface and Interior flaws, Visual inspection, Types of Boroscopes, Special features and Illumination. Liquid Penetrant Inspection- Principles, Penetrant methods, Procedure, Materials used and Applications. 12 Hrs			
Self study component: Leak detection and evaluation			
Unit- 2			
Magnetic Particle and Radiography Inspection: MPI-Principle, General procedure, Advantages, limitation, Applications, Magnetic field generation methods, Magnetic particles and Suspending liquids examples and Applications. RI- Principles, X-ray sources, Working procedure of X-ray radiography, Gamma - ray radiography, Gamma -ray sources, Real time radiography, Radiation hazard, Application examples. 10 Hrs			
Self study component: Principle and application of neutron radiography			
Unit - 3			
Optical Holography and Eddy Current Inspection: OH-Principles, Applications, Holographic recording, Reconstruction, Interferometric techniques of inspection. ECI- Principles of operation, Procedure, Advantages and Limitations, Operating variables-Coil impedance, Lift off factor, Edge effects, Skin effect and Inspection coils. Eddy current instruments, Application and examples. 10 Hrs			
Self study component: Working principle of acoustic holography			
Unit -4			
Ultrasonic Inspection and Computed Tomography: UT-Principles of ultrasonic inspection, Basic equipment, Advantages, Limitations, Applicability, Major variables in ultrasonic inspection, Transducers and Couplants, Basic inspection methods-Pulse echo method, Industrial applications. CT- Principle of working, Equipment, Capabilities, Industrial computed tomography, Applications. 10 Hrs			
Self study component: Challenges and characteristics of ultrasonic inspection			
Unit -5			
Acoustic Emission and Thermal Inspection: AE- Introduction, Acoustic emission waves and Propagation, Instrumentation, Principles, Application and Examples. Thermal inspection-Principles, Equipment, Inspection methods and Applications. Fundamentals of Image Processing Methods: Digital image enhancement system, Image capture and Acquisition system, Image processing and Image enhancement principles. 10 Hrs			
Self study component: Principle of machine vision technique

Course Title: INDUSTRIAL ROBOTICS AND AUTOMATION (Open Elective-II)			
Course Code: P18MEO653	Semester: VI	L-T-P-H: 4-0-0-4	Credits: 03
Contact Period - Lecture: 52 Hrs	Exam:3Hrs	Weightage%: CIE: 50,SEE: 50	
Course Objectives:			
<ul style="list-style-type: none"> • To familiarize students with brief history of robot and basic concepts of industrial robot. • To expose the students to programming languages of robot • To make the students familiar with various applications in robots in industry 			
Course Content			
Unit-1			
INTRODUCTION: Automation and robotics, brief history of robotics, Robot Anatomy, Joints and Links, wrist and its motions, Classifications of robots, Robot Control Systems, Geometrical configuration, Work Volume, Resolution, Accuracy and Repeatability. 10 Hrs			
Self Study Component: Pay load and Stability of robots			
Unit-2			
STRUCTURE OF ROBOTIC SYSTEM: End Effectors: types of grippers, tools. Robot drive system: Hydraulic, electric and pneumatic, Types of Actuators. Feedback components: position, velocity sensors, internal State sensors, tactile sensors, - proximity sensing, range sensing. 10 Hrs			
Self Study Component: Force-Torque Sensors			
Unit-3			
ROBOT PROGRAMMING: Introduction, manual teaching, lead through teaching, Robot programming languages: Robot language elements and functions, Motion commands, simple programs. 10 Hrs			
Self Study Component: Generations of robot programming Languages.			
Unit-4			
AUTOMATION: Basic elements of an automated system, advanced automation functions, levels of automation, computer process control and its capabilities. Forms of computer process control, Levels of Industrial Process Control. 10 Hrs			
Self Study Component: Direct Digital Control.			
Unit-5			
ROBOTS IN MANUFACTURING AUTOMATION: Material Transfer: general considerations in robot material handling: pick and place, palletizing operations. Machine loading and unloading: Die casting, Plastic moulding, Forging, machining and stamping press operations. Processing Operations: features of spot and arc welding robot spray coating and other processing applications. 12 Hrs			
Self Study Component: Recent developments in industrial applications of robot.

Department of Mechanical Engineering

At the end of the course, students will be able to,

Course Outcomes		Bloom's Level
CO1	Identify robots based on geometrical configuration, joints and links.	III
CO2	Identify different types of drive system and sensors required for specific applications.	III
CO3	Develop robot task program using robot language.	IV
CO4	Identify various elements and levels of automated system.	III
CO5	Apply the concepts of working of robots in automating the manufacturing process.	III

Course Title: EMERGING COOLING TECHNOLOGY (Open Elective-II)			
Course Code: P18MEO654	Semester: VI	L-T-P: 4-0-0	Credits: 03
Contact Period - Lecture: 52 Hrs.	Exam: 3Hrs.	Weightage % : CIE: 50 ; SEE: 50	
<p>Course objective: The course aims at understanding the concept of</p> <ul style="list-style-type: none"> • Operation, application and study of the basic refrigeration and air conditioning systems, refrigerant properties and RAC demand scenarios. • Operation and applications of promising cooling systems. 			
Course Content			
Unit-1			
<p>Introduction: History of Refrigeration, Basic Definitions, classification of cooling systems. Refrigeration: Definition, Unit of refrigeration, Coefficient of Performance, Refrigeration cycles and concepts. Refrigerants: Definition, Environmental properties of emerging Refrigerants and Refrigerant mixtures (zeotropic and azeotropic mixtures) and their choice for different applications – Eco friendly refrigerant. Air conditioning: Introduction, Basic Definitions, Classification. 10 Hrs</p> <p>Self-Learning Components: Principle of refrigeration and thermodynamics, Necessity of Refrigeration and Air-conditioning in industries.</p>			
Unit-2			
<p>Refrigeration Systems: Engineering principles of Refrigeration system and components: Vapour Compression Refrigeration System (VCRS), Vapour Absorption Refrigeration System (VBRS) Refrigeration system as heat pump, Air Refrigeration, Introduction to Steam Jet Refrigeration and Solar refrigeration. Industrial Refrigeration: Chemical and process industries, Dairy plants, Petroleum refineries, Food processing and food chain, Miscellaneous. 10 Hrs</p> <p>Self-Learning Components: Differences between Vapour Compression System and Vapour Absorption system, Necessity of compressor in Vapour Compression System.</p>			
Unit-3			
<p>Air-Conditioning Systems: Engineering principles of air conditioning system and components: Central – Station Air-Conditioning System, Unitary Air-Conditioning System, Window Air-Conditioner and Packaged Air-Conditioner. Components related to Air-Conditioning Systems. Transport air conditioning Systems: Air conditioning systems for automobiles (cars, buses etc.), Air conditioning systems for trains, Air conditioning systems for ships. Energy efficient air conditioning system. 11 Hrs</p> <p>Self-Learning Components: Air conditioning demand scenarios for India and associated health, social justice, energy, Potential sustainable air conditioning scenarios for India.</p>			
Unit-4			
<p>Thermal Comfort and Climate Analysis: The “human thermal comfort” and its implications for cooling system design, Adaptive Comfort Model and Indian Model for Adaptive Comfort (IMAC) for addressing human thermal comfort needs. Factors affecting human comfort, Introduction to the cooling standards. Implications of IMAC on mitigating the climate change and Energy consumption, Principles and tools for climate analysis. Social and Environmental Issues related to conventional Refrigeration and Air conditioning. 11 Hrs</p> <p>Self-Learning Components: Tools for predicting thermal comfort in buildings.</p>			
Unit-5			
<p>Emerging Non convectional cooling technologies (Solar cooling technologies): Principle of Solar Cooling Systems (absorption cycles, desiccant cycles and solar mechanical cycles). Solar powered air condition system, Photovoltaic (PV) solar cooling, Solar open-loop air conditioning, Solar closed-loop absorption cooling, Passive solar cooling, Solar sorption cooling, Evaporative cooling, Solar ejector cooling, Solar cooling systems utilizing concentrating collectors. Solar panels to power growing global demand for air-conditioners. 10 Hrs</p> <p>Self-Learning Components: Applications of solar cooling, Challenges of solar cooling.</p>

At the end of the course, students will be able to,

Course Outcomes		Bloom's Level
CO1	Identify the suitable eco-friendly refrigerants for refrigeration and air conditioning cooling technologies.	III
CO2	Apply the basic concepts of refrigeration to understand the principles of different refrigeration systems.	III
CO3	Apply the basic concepts of refrigeration to understand the principles of different air conditioning systems.	III
CO4	Identify and study the adaptive cooling system for analysing the consequences of Social and Environmental Issues.	III
CO5	Apply the Principles of Non-conventional Cooling Systems and its applications for global demand RAC.	III

Course Title: COMPUTER AIDED MODELING & ANALYSIS LAB																			
Course Code: P18MEL66			Sem: 06		L –T-P-H: 0:0:3:3				Credit: 1.5										
Contact Period: Lecture: 36 Hrs,				Exam: 3Hrs			Weightage % : CIE- 50, SEE-50												
Course Objective: The course aims at enabling the students to use FEM tools for solving structural and thermal problems as well enhancing their domain skills.																			
Course Content																			
PART-A																			
Exp-1: Study of ANSYS FEA package. Analysis of bars of constant cross section area, tapered cross section area and stepped bars using ANSYS.											3 Hrs								
Exp-2: Analysis of plane trusses and beams using ANSYS.											3 Hrs								
Exp-3: Plane stress analysis of plate with hole and 2D heat transfer analysis (conduction and convection).											3 Hrs								
Exp-4: Application of 2-D elements to Axisymmetric problems.											3 Hrs								
Exp-5: Vibration Analysis: Modal analysis of fixed - fixed beam Harmonic analysis of axially loaded bar, Fixed - fixed beam											3 Hrs								
PART-B																			
Exp-6: Thermal stress in simple structures (Coupled analysis).											3 Hrs								
Exp-7: Buckling analysis of columns.											3 Hrs								
Exp-8: Modelling of torsion problem.											3 Hrs								
Exp-9: Analysis of fluid flow over cylinder.											3 Hrs								
Exp-10: Analysis of mixing flow in an elbow.											3 Hrs								
Seminar											3 Hrs								
Test											3 Hrs								
Reference Books

Course Title: HEAT AND MASS TRANSFER LAB																									
Course Code: P18MEL67			Sem: 06			L –T-P-H: 0:0:3:3			Credit: 1.5																
Contact Period: Lecture: 36 Hrs,			Exam: 3Hrs			Weightage % : CIE- 50, SEE-50																			
Course Objective: The objective of this course is to provide an opportunity for mechanical engineering students to learn how to perform basic measurements of heat transfer and analyze the results.																									
Course Content																									
PART-A																									
Exp-1: Determination of thermal Conductivity of a Metal Rod.											3 Hrs														
Exp-2: Determination of Overall Heat Transfer Coefficient of a Composite wall											3 Hrs														
Exp-3: Determination of Effectiveness and Efficiency of a Metallic fin.											3 Hrs														
Exp-4: Determination of free Convective Heat Transfer Coefficient of a vertical Cylinder											3 Hrs														
Exp-5: Determination of Heat Transfer Coefficient in Forced Convection											3 Hrs														
Exp-6: Determination of Emissivity of a Surface.											3 Hrs														
Exp-7: Determination of thermal conductivity of liquid											3 Hrs														
PART-B																									
Exp 8: Determination of Stefan Boltzman Constant.											3 Hrs														
Exp 9: Determination of Effectiveness in Parallel Flow and Counter Flow Heat Exchangers.											3 Hrs														
Exp-10: Performance Test on Vapour Compression Refrigeration.											3 Hrs														
Seminar											3 Hrs														
Test											3 Hrs

Course Title: DIGITAL MANUFACTURING LAB (Skill Oriented Laboratory-II)																		
Course Code: P18MEL68			Sem: 06			L –T-P-: 0:0:2				Credit: 1								
Contact Period: Lecture: 26 Hrs,						Exam: 3Hrs		Weightage % : CIE- 50, SEE-50										
Course Objectives: The course facilitates the students to be familiar with digital manufacturing technologies like CNC machines, Robots, Additive Manufacturing, Reverse engineering etc.																		
Course Content																		
1.Experiments on hydraulic system											2 Hrs							
2.Programming of CNC milling machine											4 Hrs							
3.Programming of CNC turning centre											2 Hrs							
4.Programming a robot for pick and place operation											4 Hrs							
5.Creating part in software and producing the same using FDM machine											4 Hrs							
6.Digitization of given part using 3D scanner and building the same part in FDM machine											4 Hrs							
CIE											3 Hrs							
SEE											3 Hrs							
Reference Books

P.E.S. College of Engineering: Training & Placement Centre

<p>Program: Technical Training Program</p> <p>Duration: 36 hours</p> <p>Methodology: Blended (Classroom and lab)</p> <p>Departments: Mech, Auto, IP & Civil.</p>
--

COURSE OUTCOME:

To enable students to:

- Strengthen their understanding of **Introduction to Computer Science, C, and Data Structures**
- Write effective codes on **C Programming**

OVERALL SYLLABUS BREAKUP:

Sl. No.	Module name	Classroom (Hours)	Lab (Hours)	Total duration (Hours)
1.	Introduction to Computer Science	3	0	3
2.	C Programming	0	18	18
3.	Introduction to Data Structures	6	9	15
Total Hours		9	27	36

LEARNING OUTCOMES

- After undergoing training in this course, the students will be in a position to –
- write complete program based on the requirements and to debug.
- Frame effective programs using C programming and Data Structures.

ASSESSMENTS

- Each of the modules (C and Data Structures) will have two types of assessments -
 - Multiple-choice assessment for programming logic, concepts and debugging
 - Coding

COURSE PLAN:

C Programming

Sl. No.	Topics covered	Learning outcome	Type of learning	Duration
1.	<p>Introduction to Computer Science: Basic Structure of Computers: Basic Operational Concepts, Bus Structures, Performance– Processor Clock, Basic Performance Equation, Clock Rate, Performance Measurement.</p> <p>• Operating System - An Introduction: Definition and functions of operating systems. discussion on evolution of operating systems and different structures of operating systems.</p>	<ul style="list-style-type: none"> ● Understand the basics of computer structure and operation of computers and their peripherals and need of Operating System. 	Class - 3	3
2.	<p>C Programming Language:</p> <ul style="list-style-type: none"> • Basic level of Snippets for <ul style="list-style-type: none"> ○ Understanding basic syntax ○ If - else statement ○ Switch case ○ Struct ○ For loop ○ While and do - while loop ○ Array ○ Strings ○ Pointers ○ Function ○ String ○ File handling ○ Preprocessing 	<ul style="list-style-type: none"> ● Understand the concepts of snippets in a programming term for a small region of reusable source code, machinecode, or text. In C it could be part of the program - A Function, typedef or a part of the algorithm or code. ● Understand the concepts of programs as sequences or machine instructions. 	Lab - 18	18
3.	<p>Introduction to Data Structures: Data Structures Basics: Structure and Problem Solving, Data structures, Data structure Operations, Algorithm: complexity, Time- space tradeoff.</p> <ul style="list-style-type: none"> ○ Linked List ○ Stack and Queue ○ Searching and Sorting Techniques 	<ul style="list-style-type: none"> ● Understand common data structures and the algorithms that build and manipulate them including various sorting and searching algorithms. Data structures include arrays, linked lists, stacks, queues, Features, properties, applications, enumerators, and performance issues. 	Class –6 Lab - 9	15
